

# Graphing Exponential Functions

## Algebra 1 • Section 11.1

Name: _____	Date: _____	Score: _____ / 12
-------------	-------------	-------------------

**Quick Review and Helpful Hints**

Exponential models multiply by a constant factor over equal input intervals. Compare the initial value, multiplier, and long-term behavior before deciding what the model means.

▷ **Example:** Evaluate  $100(1.05)^2$ .

**Work:** Square the growth factor:  $1.05^2 = 1.1025$ . Then multiply:  $100(1.1025) = 110.25$ .

★ **Answer:** 110.25

◆ **Practice Problems**

Solve each problem. Show enough work that another student could follow your thinking.

- |   |  |
|---|--|
| <p>1. Evaluate <math>2^x</math> at <math>x = 5</math>. _____</p> <p>2. Find the initial value of <math>y = 4(3)^x</math>. _____</p> <p>3. Is <math>y = 7(0.5)^x</math> growth or decay? _____</p> <p>4. Find <math>y</math> when <math>x = 2</math> for <math>y = 5(2)^x</math>. _____</p> <p>5. Find the horizontal asymptote of <math>y = 3^x</math>. _____</p> | <p>6. Describe <math>y = 2^x + 4</math>. _____</p> <p>7. Describe <math>y = 3(2)^x</math> compared with <math>y = 2^x</math>. _____</p> <p>8. Find <math>y</math> when <math>x = -1</math> for <math>y = 10(2)^x</math>. _____</p> <p>9. Which point is on <math>y = 2^x</math>: <math>(3, 8)</math> or <math>(3, 6)</math>? _____</p> <p>10. Find the multiplier in <math>y = 6(1.25)^x</math>. _____</p> |
|---|--|

◆ **Word Problems**

11. A rumor triples each hour from 4 people. Write the model. \_\_\_\_\_
12. A sample halves every day from 160 grams. Write the model. \_\_\_\_\_

## Answer Keys

- |               |                          |
|---------------|--------------------------|
| 1. 32         | 7. Vertical stretch by 3 |
| 2. 4          | 8. 5                     |
| 3. Decay      | 9. (3, 8)                |
| 4. 20         | 10. 1.25                 |
| 5. $y = 0$    | 11. $4 \cdot 3^h$        |
| 6. Shift up 4 | 12. $160(0.5)^d$         |

### Step-by-Step Explanations

- Multiply 2 by itself five times and you reach  $2^5 = 32$ .
- At  $x = 0$  the power  $3^0$  is just 1, so the output starts at the coefficient 4.
- With a base between 0 and 1, each step shaves the value down — so it's decaying.
- First  $2^2 = 4$ , then multiply by the 5 out front to get 20.
- As  $x$  runs negative,  $3^x$  keeps shrinking toward zero but never quite touches the  $x$ -axis.
- That +4 tacked on outside lifts every point of the graph up by 4.
- Multiplying the whole thing by 3 triples every output, stretching the graph tall.
- A negative exponent flips it, so  $2^{-1} = \frac{1}{2}$ , and  $10 \times \frac{1}{2} = 5$ .
- Check the rule:  $2^3 = 8$ , so (3, 8) is the one that actually lands on the curve.
- The base is the number doing the repeated multiplying, so here that's 1.25.
- Start with 4 people, and tripling each hour makes 3 the repeated multiplier.
- Begin at 160 grams, and cutting in half daily means multiplying by 0.5 each day.

## Want Even More Algebra 1 Practice?

### Kentucky Algebra I Preparation Bundle

18 full-length practice tests across three books

Fresh test practice, detailed explanations, and organized review

**18 Tests**  
**3 Books**  
**One Bundle**

**Important:** These Algebra 1 resources are made for extra practice after the worksheet. Use the QR code for the state or program bundle connected with this worksheet.

#### Skill Review

- ✓ Strengthens equations, functions, systems, and modeling
- ✓ Supports steady review before tests
- ✓ Good for tutoring, homework, and independent practice

**Build the foundation.**

#### Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every test
- ✓ Useful after students finish topic worksheets

**Practice with purpose.**

#### Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps preparation organized and calm

**Move forward prepared.**
