

# Slope-Intercept Form

Algebra 1 • Section 5.2

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_ / 12

## Quick Review and Helpful Hints

Linear relationships have a constant rate of change. Use slope, intercepts, points, and context to move between equations, tables, graphs, and real-world meanings.

► **Example:** Write the line with slope 2 through (3, 11).

**Work:** Use  $y = 2x + b$ . Substitute the point:  $11 = 2(3) + b$ , so  $b = 5$ .

★ **Answer:**  $y = 2x + 5$

## ◆ Practice Problems

Solve each problem. Show enough work that another student could follow your thinking.

- |  |  |
|--|--|
| 1. Write the slope and intercept of $y = 3x - 7$ .<br>_____      | 6. Find the slope of $y = 7 - 3x$ .<br>_____                   |
| 2. Write an equation with slope 5 and intercept $-2$ .<br>_____  | 7. Write the equation with slope $-4$ through (0, 8).<br>_____ |
| 3. Write $2x + y = 9$ in slope-intercept form.<br>_____          | 8. Does (2, 1) lie on $y = 3x - 5$ ?<br>_____                  |
| 4. Write $4x - 2y = 10$ in slope-intercept form.<br>_____        | 9. Find the zero of $y = 2x - 10$ .<br>_____                   |
| 5. Find the $y$ -intercept of $y = -\frac{1}{2}x + 6$ .<br>_____ | 10. Find $y$ when $x = -1$ for $y = -6x + 4$ .<br>_____        |

## ◆ Word Problems

11. A subscription costs \$14 plus \$6 per month. Write the model. \_\_\_\_\_
12. A line starts at 80 and drops 5 each week. Write the model. \_\_\_\_\_

## Answer Keys

1.  $m = 3, b = -7$

2.  $y = 5x - 2$

3.  $y = -2x + 9$

4.  $y = 2x - 5$

5.  $6$

6.  $-3$

7.  $y = -4x + 8$

8. Yes

9.  $x = 5$

10.  $10$

11.  $y = 6x + 14$

12.  $y = -5x + 80$

### Step-by-Step Explanations

1. Match it to  $y = mx + b$ : the  $x$ -coefficient is the slope, and the lone number is where it crosses.
2. Just drop your two ingredients into the  $y = mx + b$  recipe and you're done.
3. You only need to free  $y$ , so peel off the  $2x$  by subtracting it from both sides.
4. Shift  $4x$  over, then divide everything by  $-2$  — watch how the signs flip as you go.
5. The intercept is wherever  $x = 0$ , which leaves just the constant sitting there:  $6$ .
6. Mentally swap the order to  $y = -3x + 7$ , and the slope is clearly the  $-3$ .

7. Lucky you — the point has  $x = 0$ , so  $8$  is the intercept and you can write it straight away.
8. Test it by plugging in  $x = 2$ : you get  $3(2) - 5 = 1$ , which matches, so the point is on the line.
9. The zero is where the line hits the  $x$ -axis, so set  $y = 0$  and solve  $0 = 2x - 10$ .
10. Substitute and mind the double negative:  $-6(-1) + 4 = 6 + 4 = 10$ .
11. The  $\$6$  repeats every month so it's your slope; the one-time  $\$14$  is the starting intercept.
12. Begin at  $80$ , and since it's dropping, the weekly change is a negative slope of  $-5$ .

## Want Even More Algebra 1 Practice?

### Michigan Algebra I Preparation Bundle

18 full-length practice tests across three books  
Fresh test practice, detailed explanations, and  
organized review

**18 Tests**  
**3 Books**  
**One Bundle**

**Important:** These Algebra 1 resources are made for extra practice after the worksheet. Use the QR code for the state or program bundle connected with this worksheet.

#### Skill Review

- ✓ Strengthens equations, functions, systems, and modeling
- ✓ Supports steady review before tests
- ✓ Good for tutoring, homework, and independent practice

**Build the foundation.**

#### Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every test
- ✓ Useful after students finish topic worksheets

**Practice with purpose.**

#### Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps preparation organized and calm

**Move forward prepared.**
