

Adding and Subtracting Decimals

Name: _____

Date: _____

Score: _____ / 18

Quick Review and Helpful Hints

To add or subtract decimals, line up the decimal points so each place value matches, filling empty spots with zeros if it helps. Then add or subtract just like whole numbers and bring the decimal point straight down into the answer.

▶ **Example:** Add $3.4 + 12.75$. **Work:** Line up the points and fill a zero:
 $03.40 + 12.75$. Add column by column to get 16.15, with the decimal point straight down. ★ **Answer:** 16.15

$$\begin{array}{r} 03.40 \\ + 12.75 \\ \hline 16.15 \end{array}$$

Line up the decimal points.

◆ Practice Problems

Add or subtract.

1. $2.3 + 1.5$ _____

8. $6.7 + 0.85$ _____

2. $4.7 + 2.6$ _____

9. $12.4 - 5.6$ _____

3. $5.6 - 2.1$ _____

10. $0.9 + 0.08$ _____

4. $8.3 - 4.7$ _____

11. $7.25 - 3.5$ _____

5. $0.45 + 0.3$ _____

12. $2.6 + 4.75$ _____

6. $1.25 + 3.6$ _____

13. $10 - 2.35$ _____

7. $9.0 - 3.45$ _____

14. $3.14 + 2.86$ _____

◆ Word Problems

15. You have \$20 and spend \$7.45. How much money is left? _____

16. A bottle holds 1.5 liters and another holds 0.75 liter. How much in all? _____

17. A runner went 5.2 km, then 3.85 km more. What was the total distance? _____

18. A board is 4.5 feet long. After cutting off 1.75 feet, how much remains? _____

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up the decimal points and add place by place: $2.3 + 1.5 = 3.8$. So the final answer is 3.8.

2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add column by column, carrying when a column passes 9: $4.7 + 2.6 = 7.3$. So the final answer is 7.3.

3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up the points and subtract: $5.6 - 2.1 = 3.5$. So the final answer is 3.5.

4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up the points; you must borrow in the tenths: $8.3 - 4.7 = 3.6$. So the final answer is 3.6.

5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Write 0.3 as 0.30 so the places line up, then add: $0.45 + 0.30 = 0.75$. So the final answer is 0.75.

6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up as $1.25 + 3.60$ and add: 4.85. So the final answer is 4.85.

7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Write 9 as 9.00 so the columns match, then subtract: $9.00 - 3.45 = 5.55$. So the final answer is 5.55.

8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up as $6.70 + 0.85$ and add: 7.55. So the final answer is 7.55.

9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up the points and subtract, borrowing once: $12.4 - 5.6 = 6.8$. So the final answer is 6.8.

10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up as $0.90 + 0.08 = 0.98$. So the final answer is 0.98.

11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Write 3.5 as 3.50, then subtract: $7.25 - 3.50 = 3.75$. So the final answer is 3.75.

12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Line up as $2.60 + 4.75$ and add: 7.35. So the final answer is 7.35.

13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Write 10 as 10.00, then subtract: $10.00 - 2.35 = 7.65$. So the final answer is 7.65.

14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add carefully: $3.14 + 2.86 = 6.00$, which is simply 6. So the final answer is 6.

15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract what you spend from what you have: $20.00 - 7.45 = \$12.55$ left. So the final answer is \$12.55.

16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add the two volumes, lined up: $1.50 + 0.75 = 2.25$ liters. So the final answer is 2.25 L.

17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add the two distances: $5.20 + 3.85 = 9.05$ km. So the final answer is 9.05 km.

18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract the cut piece from the length: $4.50 - 1.75 = 2.75$ ft remain. So the final answer is 2.75 ft.

Want Even More GED Math Practice?

The Most Comprehensive GED Math Preparation Bundle

Prep books, workbooks, and full-length practice tests

Complete review, detailed explanations, and realistic test practice

Important: These GED Math resources are made for extra practice after the worksheet. Scan the QR code above for the complete GED Math preparation bundle.

Skill Review

- ✓ Builds number sense, algebra, geometry, and data skills
- ✓ Supports steady review before the GED test
- ✓ Great for tutoring, homework, and independent practice

Build the foundation.

Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every question
- ✓ Useful after students finish topic worksheets

Practice with purpose.

Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps GED preparation organized and calm

Move forward prepared.

GED Math for Beginners

The Ultimate Step-by-Step Guide to Preparing for the GED Math Test

Written by a top math teacher and aligned with the latest GED Math test. From fractions and percents to algebra and geometry — explained the easy way.

- ✓ **Complete coverage** of every GED Math topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom

* **STUDENT'S #1 CHOICE**
