

Evaluating Two Variables

Name: _____

Date: _____

Score: _____ / 18

Quick Review and Helpful Hints

When an expression has two variables, substitute a value for *each* one (in parentheses), then simplify using the order of operations. Be sure to replace every copy of each variable before you start computing.

▶ **Example:** Evaluate $2x + 3y$ when $x = 4$ and $y = 2$. **Work:** Substitute both values: $2(4) + 3(2)$. Multiply each term first: $8 + 6$. Then add. ★ **Answer:** 14

◆ Practice Problems

Evaluate each expression for the given values.

1. $x + y$, when $x = 5$, $y = 3$

2. xy , when $x = 6$, $y = 4$

3. $2x + y$, when $x = 3$, $y = 7$

4. $x - y$, when $x = 10$, $y = 4$

5. $3x + 2y$, when $x = 2$, $y = 5$

6. $xy + 1$, when $x = 4$, $y = 3$

7. $x^2 + y$, when $x = 3$, $y = 8$

8. $2(x + y)$, when $x = 5$, $y = 1$

9. $5x - y$, when $x = 4$, $y = 6$

10. $\frac{x}{y}$, when $x = 12$, $y = 3$

11. $x^2 + y^2$, when $x = 3$, $y = 4$

12. $xy - x$, when $x = 5$, $y = 2$

13. $4x + y$, when $x = -2$, $y = 10$

14. $x - 2y$, when $x = 9$, $y = 3$

◆ Word Problems

15. The area of a rectangle is $A = lw$. Find the area when $l = 8$ m and $w = 5$ m.

16. The perimeter of a rectangle is $2l + 2w$. Find it when $l = 7$ ft and $w = 3$ ft.

17. A worker earns $15h + 20b$ dollars for h hours plus b bonuses. Find the pay when $h = 6$ and $b = 2$.

18. The expression $\frac{a + b}{2}$ gives the average of two test scores. Find it when $a = 88$ and $b = 92$.

Answer Keys

- | | | |
|------------------------------------|-------------------------------------|---|
| 1. <input type="text" value="8"/> | 7. <input type="text" value="17"/> | 13. <input type="text" value="2"/> |
| 2. <input type="text" value="24"/> | 8. <input type="text" value="12"/> | 14. <input type="text" value="3"/> |
| 3. <input type="text" value="13"/> | 9. <input type="text" value="14"/> | 15. <input type="text" value="40 m<sup>2</sup>"/> |
| 4. <input type="text" value="6"/> | 10. <input type="text" value="4"/> | 16. <input type="text" value="20 ft"/> |
| 5. <input type="text" value="16"/> | 11. <input type="text" value="25"/> | 17. <input type="text" value="\$130"/> |
| 6. <input type="text" value="13"/> | 12. <input type="text" value="5"/> | 18. <input type="text" value="90"/> |

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $5 + 3 = 8$. So the final answer is 8.
2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $6 \cdot 4 = 24$. So the final answer is 24.
3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $2(3) + 7 = 6 + 7 = 13$. So the final answer is 13.
4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $10 - 4 = 6$. So the final answer is 6.
5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $3(2) + 2(5) = 6 + 10 = 16$. So the final answer is 16.
6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $4 \cdot 3 + 1 = 12 + 1 = 13$. So the final answer is 13.
7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $3^2 + 8 = 9 + 8 = 17$. So the final answer is 17.
8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $2(5 + 1) = 2(6) = 12$. So the final answer is 12.
9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $5(4) - 6 = 20 - 6 = 14$. So the final answer is 14.
10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $\frac{12}{3} = 4$. So the final answer is 4.
11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $3^2 + 4^2 = 9 + 16 = 25$. So the final answer is 25.
12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $5 \cdot 2 - 5 = 10 - 5 = 5$. So the final answer is 5.
13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $4(-2) + 10 = -8 + 10 = 2$. So the final answer is 2.
14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $9 - 2(3) = 9 - 6 = 3$. So the final answer is 3.
15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $A = 8 \cdot 5 = 40$ square meters. So the final answer is 40 m^2 .
16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $2(7) + 2(3) = 14 + 6 = 20$ feet. So the final answer is 20 ft.
17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $15(6) + 20(2) = 90 + 40 = \130 . So the final answer is \$130.
18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $\frac{88 + 92}{2} = \frac{180}{2} = 90$. So the final answer is 90.

Want Even More GED Math Practice?

The Most Comprehensive GED Math Preparation Bundle

Prep books, workbooks, and full-length practice tests
Complete review, detailed explanations, and realistic test practice

Important: These GED Math resources are made for extra practice after the worksheet. Scan the QR code above for the complete GED Math preparation bundle.

Skill Review

- ✓ Builds number sense, algebra, geometry, and data skills
- ✓ Supports steady review before the GED test
- ✓ Great for tutoring, homework, and independent practice

Build the foundation.

Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every question
- ✓ Useful after students finish topic worksheets

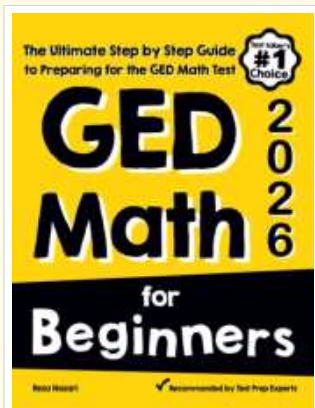

Practice with purpose.

Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps GED preparation organized and calm

Move forward prepared.

GED Math for Beginners

The Ultimate Step-by-Step Guide to Preparing for the GED Math Test

Written by a top math teacher and aligned with the latest GED Math test. From fractions and percents to algebra and geometry — explained the easy way.

- ✓ **Complete coverage** of every GED Math topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom

* **STUDENT'S #1 CHOICE**
