## Quick Review and Helpful Hints

In scientific notation a number is  $a \times 10^n$  with  $1 \leq a < 10$ . To *multiply*, multiply the front numbers and *add* the exponents. To *divide*, divide the fronts and *subtract* the exponents.

▶ **Example:** Multiply  $(2 \times 10^3)(3 \times 10^2)$ . **Work:** Multiply the fronts:  
 $2 \times 3 = 6$ . Add the exponents:  $3 + 2 = 5$ . ★ **Answer:**  $6 \times 10^5$

$$(a \times 10^m)(b \times 10^n) = ab \times 10^{m+n}$$

Multiply fronts, add exponents.

### Step-by-Step Explanations

1. Start by naming the process: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $2 \times 3 = 6$ ,  $3 + 2 = 5$ :  $6 \times 10^5$ . So the final answer is  $6 \times 10^5$ .

2. A good way to think about this is: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $4 \times 2 = 8$ ,  $2 + 3 = 5$ :  $8 \times 10^5$ . So the final answer is  $8 \times 10^5$ .

3. Step by step: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $6 \div 2 = 3$ ,  $5 - 2 = 3$ :  $3 \times 10^3$ . So the final answer is  $3 \times 10^3$ .

4. Take it one move at a time: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $2 \times 4 = 8$ ,  $4 + 1 = 5$ :  $8 \times 10^5$ . So the final answer is  $8 \times 10^5$ .

5. Start by naming the process: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $9 \div 3 = 3$ ,  $6 - 2 = 4$ :  $3 \times 10^4$ . So the final answer is  $3 \times 10^4$ .

6. A good way to think about this is: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $5 \times 1 = 5$ ,  $2 + 3 = 5$ :  $5 \times 10^5$ . So the final answer is  $5 \times 10^5$ .

7. Step by step: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $8 \div 4 = 2$ ,  $4 - 2 = 2$ :  $2 \times 10^2$ . So the final answer is  $2 \times 10^2$ .

8. Take it one move at a time: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $3 \times 3 = 9$ ,  $2 + 2 = 4$ :  $9 \times 10^4$ . So the final answer is  $9 \times 10^4$ .

9. Start by naming the process: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $1 \times 7 = 7$ ,  $3 + 2 = 5$ :  $7 \times 10^5$ . So the final answer is  $7 \times 10^5$ .

10. A good way to think about this is: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $6 \div 2 = 3$ ,  $8 - 3 = 5$ :  $3 \times 10^5$ . So the final answer is  $3 \times 10^5$ .

11. Step by step: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $2 \times 2 = 4$ ,  $2 + 2 = 4$ :  $4 \times 10^4$ . So the final answer is  $4 \times 10^4$ .

12. Take it one move at a time: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $4 \times 2 = 8$ ,  $3 + 2 = 5$ :  $8 \times 10^5$ . So the final answer is  $8 \times 10^5$ .

13. Start by naming the process: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $9 \div 3 = 3$ ,  $4 - 1 = 3$ :  $3 \times 10^3$ . So the final answer is  $3 \times 10^3$ .

14. A good way to think about this is: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is Move the point 3 right: 5000. So the final answer is 5000.

15. Step by step: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $3 \times 2 = 6$ ,  $4 + 2 = 6$ :  $6 \times 10^6$ . So the final answer is  $6 \times 10^6$ .

16. Take it one move at a time: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $8 \div 2 = 4$ ,  $6 - 2 = 4$ :  $4 \times 10^4$ . So the final answer is  $4 \times 10^4$ .

17. Start by naming the process: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is  $2 \times 4 = 8$ ,  $3 + 3 = 6$ :  $8 \times 10^6$ . So the final answer is  $8 \times 10^6$ .

18. A good way to think about this is: Handle the front numbers and the powers of ten separately, then rewrite the result in scientific notation if needed. The setup/work is Move the point 5 right: 600000. So the final answer is 600000.
