## Quick Review

Good readers ask questions like who, what, where, when, why, and how. To answer, look back at the text and find the fact that tells you.

### PART 1 — READ

Read the passage. Then answer the questions.

#### The Work of a Honeybee

A honeybee is a small insect that lives in a hive. Many bees live in one hive together. Each bee has a job to do. The queen bee lays the eggs. Worker bees fly out to find food. They keep the hive clean and safe. Bees work hard every single day.

Worker bees look for flowers. They drink a sweet juice called nectar. They carry the nectar back to the hive. Bees turn nectar into honey. They store the honey in little wax cells. Bees eat honey in the winter when no flowers bloom.

Bees also help flowers grow. Yellow dust called pollen sticks to a bee's body. The bee carries pollen from flower to flower. This helps new plants and seeds grow. Bees are tiny, but they help the whole world.
