## Q Quick Review

To add two-digit numbers, line them up by place value: **ones under ones** and **tens under tens**. First add the ones. If the ones add up to 10 or more, you must **regroup** — carry one ten over to the tens column. Then add the tens, including any ten you carried. For example, in  $47 + 38$ , the ones make  $7 + 8 = 15$ , so write 5 and carry 1 ten. Adding carefully one column at a time keeps your answer correct.

◇ **Example:** Find the sum:  $47 + 38$ .

⇒ Start with the ones column:  $7 + 8 = 15$ . That is more than 9, so we regroup — write 5 in the ones place and carry 1 ten to the tens column. Now add the tens:  $4 + 3 = 7$ , plus the 1 we carried makes 8. Write 8 in the tens place. So  $47 + 38 = 85$ .

**Answer:**  $47 + 38 = 85$

## PRACTICE

Add to find each sum.
