## Q Quick Review

To subtract three-digit numbers, line up the **ones**, **tens**, and **hundreds**. Start at the ones column. Whenever the top digit is too small to subtract, **regroup** — borrow one from the next place to the left. Sometimes you must regroup more than once. Work column by column from right to left. You can **check** your answer by adding it to the number you subtracted to see if you get back the starting number.

◇ **Example:** Find the difference:  $524 - 167$ .

⇒ Start with the ones: we cannot take 7 from 4, so borrow a ten to make 14, and  $14 - 7 = 7$ . The tens are now 1; we cannot take 6 from 1, so borrow a hundred to make 11, and  $11 - 6 = 5$ . The hundreds are now 4; subtract  $4 - 1 = 3$ . So  $524 - 167 = 357$ .

**Answer:**  $524 - 167 = 357$

## PRACTICE

Subtract to find each difference.
