

# Area of Rectangles

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

The **area** of a shape is the amount of flat space it covers, measured in **square units** (like square feet or square meters). For a rectangle, you find the area by multiplying the **length** times the **width**:  $\text{area} = \text{length} \times \text{width}$ . Think of it as counting the rows and columns of unit squares that fill the rectangle. For example, a rug 5 feet long and 3 feet wide has an area of  $5 \times 3 = 15$  square feet. **Always use square units** in your answer, because area covers a surface, not just a line.

◊ **Example:** A rectangle has a length of 7 meters and a width of 4 meters. What is its area?  
 ⇒ Area means how much flat space the rectangle covers, and for a rectangle we multiply length by width. The length is 7 m and the width is 4 m, so  $7 \times 4 = 28$ . Picture 4 rows of 7 unit squares — that is 28 little squares in all. Because area covers a surface, the unit is square meters.

**Answer:** 28 square meters

## PRACTICE

Find the area of each rectangle. Use square units.
