

# Classifying Triangles

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_ / 24

## Q Quick Review

A **triangle** is a shape with 3 sides and 3 angles. We can sort triangles by their angles. A **right triangle** has exactly one  $90^\circ$  angle. An **acute triangle** has all three angles less than  $90^\circ$ . An **obtuse triangle** has one angle that is larger than  $90^\circ$ . We can also sort triangles by their sides. An **equilateral triangle** has all 3 sides equal. An **isosceles triangle** has exactly 2 sides equal. A **scalene triangle** has no equal sides — all 3 sides are different lengths.

◇ **Example:** A triangle has one angle that measures  $110^\circ$ . The other two angles are smaller. How would you classify this triangle by its angles?

⇒ Look at the biggest angle: it measures  $110^\circ$ . Compare that to  $90^\circ$ . Since  $110^\circ$  is larger than  $90^\circ$ , the triangle has one obtuse angle. A triangle with an angle bigger than  $90^\circ$  is called an obtuse triangle, no matter what the other angles are.

**Answer:** obtuse triangle

## PRACTICE

Classify each triangle by its angles or by its sides as described.

- |  |       |   |       |
|--|-------|---|-------|
| 1. A triangle with one $90^\circ$ angle                  | _____ | 12. A triangle with angles $70^\circ, 60^\circ, 50^\circ$         | _____ |
| 2. A triangle with all 3 sides equal                     | _____ | 13. A triangle with sides 9, 9, 4                                 | _____ |
| 3. A triangle with exactly 2 equal sides                 | _____ | 14. A triangle with one angle of $90^\circ$ and two of $45^\circ$ | _____ |
| 4. A triangle with no equal sides                        | _____ | 15. A triangle with sides 4, 8, 11                                | _____ |
| 5. A triangle with one angle of $120^\circ$              | _____ | 16. A triangle with angles $80^\circ, 80^\circ, 20^\circ$         | _____ |
| 6. A triangle with angles $60^\circ, 60^\circ, 60^\circ$ | _____ | 17. A triangle with one angle of $150^\circ$                      | _____ |
| 7. A triangle with sides 5, 5, 8                         | _____ | 18. A triangle with sides 6, 6, 6                                 | _____ |
| 8. A triangle with sides 3, 6, 7                         | _____ | 19. A triangle with sides 10, 10, 14                              | _____ |
| 9. A triangle with angles $90^\circ, 45^\circ, 45^\circ$ | _____ | 20. A triangle with angles $90^\circ, 60^\circ, 30^\circ$         | _____ |
| 10. A triangle with sides 7, 7, 7                        | _____ |   |       |
| 11. A triangle with one angle of $100^\circ$             | _____ |   |       |

## ◆ Word Problems

21. Emma cuts a triangle out of paper for a craft. She measures its three sides and finds they are 5 cm, 5 cm, and 5 cm. What kind of triangle did Emma cut? \_\_\_\_\_
22. A road sign is shaped like a triangle. One of its angles measures  $90^\circ$ . What kind of triangle is the sign, classified by its angles? \_\_\_\_\_
23. Carlos draws a triangle where the three angles measure  $55^\circ, 65^\circ,$  and  $60^\circ$ . How should Carlos classify his triangle by its angles? \_\_\_\_\_
24. Ava measures the sides of a triangular flag and gets 12 in, 9 in, and 15 in. Classified by its sides, what kind of triangle is the flag? \_\_\_\_\_

## Answer Keys

- |                          |                             |
|--------------------------|-----------------------------|
| 1. right triangle        | 13. isosceles triangle      |
| 2. equilateral triangle  | 14. right triangle          |
| 3. isosceles triangle    | 15. scalene triangle        |
| 4. scalene triangle      | 16. acute triangle          |
| 5. obtuse triangle       | 17. obtuse triangle         |
| 6. acute triangle        | 18. equilateral triangle    |
| 7. isosceles triangle    | 19. isosceles triangle      |
| 8. scalene triangle      | 20. right triangle          |
| 9. right triangle        | 21. an equilateral triangle |
| 10. equilateral triangle | 22. a right triangle        |
| 11. obtuse triangle      | 23. an acute triangle       |
| 12. acute triangle       | 24. a scalene triangle      |

### Step-by-Step Explanations

- |   |   |
|---|---|
| 1. Exactly one $90^\circ$ angle makes it a right triangle.                        | 13. Two sides match (9 and 9), so it is an isosceles triangle.  |
| 2. All three sides equal means the triangle is equilateral.                       | 14. The $90^\circ$ angle tells us it is a right triangle.   |
| 3. Exactly two equal sides makes the triangle isosceles.                          | 15. No two sides are equal, so the triangle is scalene.   |
| 4. When all three sides are different, the triangle is scalene.                   | 16. All three angles are under $90^\circ$ , so it is an acute triangle.   |
| 5. An angle of $120^\circ$ is larger than $90^\circ$ , so the triangle is obtuse. | 17. $150^\circ$ is far bigger than $90^\circ$ , so the triangle is obtuse.                                      |
| 6. All three angles are less than $90^\circ$ , so this is an acute triangle.      | 18. All three sides are equal, so the triangle is equilateral.  |
| 7. Two sides are equal (5 and 5), so the triangle is isosceles.                   | 19. Two sides are equal (10 and 10), so it is isosceles.  |
| 8. All three sides are different lengths, so the triangle is scalene.             | 20. One angle is exactly $90^\circ$ , so this is a right triangle.  |
| 9. It has a $90^\circ$ angle, so it is a right triangle.                          | 21. All three sides are equal at 5 cm, so the triangle is equilateral.  |
| 10. All three sides are the same length, so it is equilateral.                    | 22. A triangle with one $90^\circ$ angle is a right triangle.   |
| 11. $100^\circ$ is greater than $90^\circ$ , so the triangle is obtuse.           | 23. Each angle ( $55^\circ$ , $65^\circ$ , and $60^\circ$ ) is less than $90^\circ$ , so the triangle is acute. |
| 12. Every angle is below $90^\circ$ , so the triangle is acute.                   | 24. The three sides are all different lengths, so the triangle is scalene.                                      |

## Want Even More Practice? Check Out Our Other California CAASPP Test Books!

### California CAASPP Grade 4 Math Preparation Bundle

18 full-length practice tests across three books  
(5 + 6 + 7)

No repeated questions—maximum practice value!

**18 Tests!**  
**3 Books**  
**One Bundle**

**Important:** All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

#### 5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for CAASPP test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

**Start your practice journey!**

#### 6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

**Take your practice to the next level!**

#### 7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 4
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

**Go all the way with comprehensive practice!**
