## Q Quick Review

Two fractions are **equivalent** when they name the same amount, even though they look different. For example,  $\frac{1}{2}$  and  $\frac{2}{4}$  cover the same part of a whole. To build an equivalent fraction, **multiply** the top number (numerator) and the bottom number (denominator) by the same number. To make a fraction simpler, **divide** the top and bottom by the same number. The key idea: whatever you do to the top, you must do to the bottom. A fraction is in **simplest form** when the only number that divides both the top and bottom evenly is 1.

◇ **Example:** Fill in the missing number:  $\frac{3}{4} = \frac{?}{12}$ .

⇒ Look at the denominators. To get from 4 to 12, we multiply by 3, because  $4 \times 3 = 12$ . To keep the fraction equivalent, we must multiply the top by the same number:  $3 \times 3 = 9$ . So the missing numerator is 9, which means  $\frac{3}{4} = \frac{9}{12}$ .

**Answer:**  $\frac{9}{12}$

### Step-by-Step Explanations

1. Multiply top and bottom by 2:  $1 \times 2 = 2$  and  $2 \times 2 = 4$ .
2. The bottom doubled, so double the top too:  $1 \times 2 = 2$ .
3. To go from 5 to 10 you multiply by 2, so  $2 \times 2 = 4$  on top.
4. The bottom doubled from 4 to 8, so double the top:  $3 \times 2 = 6$ .
5. To get 8 you multiply 2 by 4, so the top is  $1 \times 4 = 4$ .
6. 3 times 4 is 12, so multiply the top by 4:  $2 \times 4 = 8$ .
7. 4 times 3 is 12, so the top becomes  $1 \times 3 = 3$ .
8. The bottom doubled, so double the top too:  $3 \times 2 = 6$ .
9. 6 times 2 is 12, so multiply the top by 2:  $5 \times 2 = 10$ .
10. 5 times 20 is 100, so the top is  $1 \times 20 = 20$ .
11. 10 times 10 is 100, so multiply the top by 10:  $3 \times 10 = 30$ .
12. 2 times 3 is 6, so the top becomes  $1 \times 3 = 3$ .
13. Divide top and bottom by 2:  $2 \div 2 = 1$  and  $4 \div 2 = 2$ .
14. Divide top and bottom by 2:  $4 \div 2 = 2$  and  $6 \div 2 = 3$ .
15. Divide top and bottom by 2:  $6 \div 2 = 3$  and  $8 \div 2 = 4$ .
16. Both 2 and 8 divide by 2:  $2 \div 2 = 1$  and  $8 \div 2 = 4$ .
17. Both 5 and 10 divide by 5:  $5 \div 5 = 1$  and  $10 \div 5 = 2$ .
18. Both 6 and 12 divide by 6:  $6 \div 6 = 1$  and  $12 \div 6 = 2$ .
19. Both 8 and 12 divide by 4:  $8 \div 4 = 2$  and  $12 \div 4 = 3$ .
20. Both 50 and 100 divide by 50:  $50 \div 50 = 1$  and  $100 \div 50 = 2$ .
21. Multiply the top and bottom of  $\frac{1}{2}$  by 4:  $\frac{1 \times 4}{2 \times 4} = \frac{4}{8}$ . The fractions are equivalent, so they ate the same amount.
22. Since  $3 \times 4 = 12$ , multiply the top by 4 as well:  $2 \times 4 = 8$ . So  $\frac{2}{3} = \frac{8}{12}$  cup.
23. Both 15 and 20 divide by 5:  $15 \div 5 = 3$  and  $20 \div 5 = 4$ . So  $\frac{15}{20} = \frac{3}{4}$ .
24. Ava took  $\frac{3}{6}$ . Divide the top and bottom by 3:  $3 \div 3 = 1$  and  $6 \div 3 = 2$ , giving  $\frac{1}{2}$ .
