

# Finding Factors and Multiples

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

A **factor** of a number divides it evenly, with no remainder. To list all the factors of a number, look for pairs that multiply to give it — for 12, the pairs are  $1 \times 12$ ,  $2 \times 6$ , and  $3 \times 4$ . A **multiple** of a number is what you get when you skip-count by it, like 4, 8, 12, 16, . . . for the number 4. Every number is a **factor** of its own multiples. Knowing factors and multiples helps you with division, fractions, and finding patterns in numbers.

◊ **Example:** List all the factors of 24.

⇒ Look for every pair of numbers that multiplies to 24. Start at 1:  $1 \times 24 = 24$ . Then  $2 \times 12 = 24$ . Then  $3 \times 8 = 24$ . Then  $4 \times 6 = 24$ . Does 5 work? No, 24 is not divisible by 5. Next would be  $6 \times 4$ , but we already have that pair, so we can stop. Collecting every number we found gives the full list of factors.

**Answer:** 1, 2, 3, 4, 6, 8, 12, 24
