

Interpreting Remainders

Name: _____

Date: _____

Score: _____ / 24

Q Quick Review

When you divide and the numbers do not split evenly, you get a **remainder** — the amount left over. For example, $17 \div 5 = 3 \text{ R } 2$, because 5 goes into 17 three times with 2 left over. The tricky part is knowing what the remainder **means** in a real problem. Sometimes you **drop** the remainder, sometimes you **round up** to the next whole number, and sometimes the remainder **is** the answer. Always reread the question and ask what the leftover amount stands for.

◇ **Example:** 23 students are riding in vans. Each van holds 4 students. How many vans are needed so everyone has a ride?
 ⇒ First do the division: $23 \div 4 = 5 \text{ R } 3$. Five full vans carry 20 students, but 3 students still need a ride. We cannot leave them behind, so we round up and add one more van. That gives $5 + 1 = 6$ vans. Here the remainder tells us to round up.

Answer: 6 vans

PRACTICE

Divide and write the remainder. Think about what it means.

Four vans carry 28, but 2 students are still waiting, so we round up to 5 vans.</p> <p>22. $53 \div 8 = 6 \text{ R } 5$. She can fill 6 bags completely. The 5 leftover cookies are not enough for a full bag, so we drop the remainder.</p> <p>23. $100 \div 6 = 16 \text{ R } 4$. Sixteen pages hold 96 photos, and 4 are left, so he needs one more page: $16 + 1 = 17$ pages.</p> <p>24. $45 \div 4 = 11 \text{ R } 1$. Each station gets 11 markers, and the remainder of 1 marker goes back in the supply box. Here the remainder is the answer.</p> |
