

# Prime and Composite Numbers

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

A **prime number** has exactly two factors: 1 and itself. For example, 7 is prime because only  $1 \times 7$  makes 7. A **composite number** has *more* than two factors — it can be split into equal groups in more than one way, like 12, which has factors 1, 2, 3, 4, 6, and 12. The number 1 is **special**: it is neither prime nor composite, because it has only one factor. To test a number, try to find a factor other than 1 and itself — if you can, it is composite.

◇ **Example:** Is 21 prime or composite?

⇒ Check whether 21 has any factors besides 1 and 21. Is it even? No. Does 3 divide it? Yes —  $3 \times 7 = 21$ . Since 21 has the extra factors 3 and 7, it has more than two factors. That means 21 is **composite**.

**Answer:** Composite

### Step-by-Step Explanations

- |  |  |
|--|--|
| <p>1. 2 has only the factors 1 and 2, so it is prime — the only even prime number.</p> <p>2. 9 has the extra factor 3 (<math>3 \times 3 = 9</math>), so it is composite.</p> <p>3. 11 has only the factors 1 and 11, so it is prime.</p> <p>4. 15 has the extra factors 3 and 5 (<math>3 \times 5 = 15</math>), so it is composite.</p> <p>5. 13 has only the factors 1 and 13, so it is prime.</p> <p>6. 21 has the extra factors 3 and 7, so it is composite.</p> <p>7. 17 has only the factors 1 and 17, so it is prime.</p> <p>8. 25 has the extra factor 5 (<math>5 \times 5 = 25</math>), so it is composite.</p> <p>9. 19 has only the factors 1 and 19, so it is prime.</p> <p>10. 27 has the extra factors 3 and 9, so it is composite.</p> <p>11. 23 has only the factors 1 and 23, so it is prime.</p> <p>12. 33 has the extra factors 3 and 11, so it is composite.</p> <p>13. 29 has only the factors 1 and 29, so it is prime.</p> <p>14. 39 has the extra factors 3 and 13, so it is composite.</p> | <p>15. 31 has only the factors 1 and 31, so it is prime.</p> <p>16. 49 has the extra factor 7 (<math>7 \times 7 = 49</math>), so it is composite.</p> <p>17. 37 has only the factors 1 and 37, so it is prime.</p> <p>18. 51 has the extra factors 3 and 17, so it is composite.</p> <p>19. 41 has only the factors 1 and 41, so it is prime.</p> <p>20. 57 has the extra factors 3 and 19, so it is composite.</p> <p>21. 7 is prime — its only factors are 1 and 7 — so it cannot be split into equal groups other than one group of 7 or seven groups of 1.</p> <p>22. 18 is composite with factors 1, 2, 3, 6, 9, 18, so the coach can make equal teams, such as 2 teams of 9 or 3 teams of 6.</p> <p>23. 2 is even, but its only factors are 1 and 2, so it is prime. That one example shows Mia is not correct.</p> <p>24. 11 and 13 each have only two factors, so they are prime. 12 and 14 have more than two factors, so they are composite.</p> |
