

Dividing by One-Digit Divisors

Grade 5 Math • Section 2.2

Name: _____

Date: _____

Score: _____ / 17

Quick Review and Helpful Hints

- 👉 **Long-division steps:** Divide → Multiply → Subtract → Bring down. Repeat.
- 💡 Check by multiplying: quotient \times divisor + remainder = dividend.
- ⚠️ If a digit in the dividend is too small to divide, write 0 in the quotient and bring down the next digit.

🔍 **Example:** Find $4,536 \div 8$.

👉 8 goes into 45 five times ($8 \times 5 = 40$, remainder 5). Bring down 3: $53 \div 8 = 6$ remainder 5. Bring down 6: $56 \div 8 = 7$ exactly. Answer: 567.

💡 **Answer:** 567

Practice Problems

Divide. Write the quotient and any remainder.

- | | | |
|---------------------------|----------------------------|----------------------------|
| 1. $846 \div 3 =$ _____ | 6. $2,709 \div 9 =$ _____ | 11. $6,125 \div 5 =$ _____ |
| 2. $975 \div 5 =$ _____ | 7. $4,816 \div 8 =$ _____ | 12. $8,461 \div 7 =$ _____ |
| 3. $1,248 \div 4 =$ _____ | 8. $1,530 \div 6 =$ _____ | 13. $3,504 \div 8 =$ _____ |
| 4. $3,654 \div 6 =$ _____ | 9. $9,072 \div 4 =$ _____ | 14. $2,917 \div 9 =$ _____ |
| 5. $5,040 \div 7 =$ _____ | 10. $7,203 \div 3 =$ _____ | 15. $5,555 \div 6 =$ _____ |

Word Problems

16. A bakery makes 2,346 cookies and packs them equally into 6 boxes. How many cookies are in each box? _____

17. A ribbon is 1,575 centimeters long. It is cut into 9 equal pieces. How long is each piece? _____

Answer Keys

- | | |
|----------|---------------|
| 1. 282 | 10. 2,401 |
| 2. 195 | 11. 1,225 |
| 3. 312 | 12. 1,208 R 5 |
| 4. 609 | 13. 438 |
| 5. 720 | 14. 324 R 1 |
| 6. 301 | 15. 925 R 5 |
| 7. 602 | 16. 391 |
| 8. 255 | 17. 175 |
| 9. 2,268 | |

Step-by-Step Explanations

- Start with the main idea. For dividing by one-digit divisors, divide 846 by 3. $846 \div 3 = 282$. Check division by multiplying the quotient back by the divisor.
- Keep the work tidy. For dividing by one-digit divisors, divide 975 by 5. $975 \div 5 = 195$. A remainder means there was not enough left for one more full group.
- Look at what the numbers mean. For dividing by one-digit divisors, divide 1,248 by 4. $1,248 \div 4 = 312$. Use estimation to choose a quotient that is close before you divide exactly.
- Use the setup first. For dividing by one-digit divisors, divide 3,654 by 6. $3,654 \div 6 = 609$. Check division by multiplying the quotient back by the divisor.
- Check the size of the answer. For dividing by one-digit divisors, divide 5,040 by 7. $5,040 \div 7 = 720$. A remainder means there was not enough left for one more full group.
- Match the operation to the words. For dividing by one-digit divisors, divide 2,709 by 9. $2,709 \div 9 = 301$. Use estimation to choose a quotient that is close before you divide exactly.
- Write the important values first. For dividing by one-digit divisors, divide 4,816 by 8. $4,816 \div 8 = 602$. Check division by multiplying the quotient back by the divisor.
- Follow the pattern carefully. For dividing by one-digit divisors, divide 1,530 by 6. $1,530 \div 6 = 255$. A remainder means there was not enough left for one more full group.
- Start with the main idea. For dividing by one-digit divisors, divide 9,072 by 4. $9,072 \div 4 = 2,268$. Use estimation to choose a quotient that is close before you divide exactly.
- Keep the work tidy. For dividing by one-digit divisors, divide 7,203 by 3. $7,203 \div 3 = 2,401$. Check division by multiplying the quotient back by the divisor.
- Look at what the numbers mean. For dividing by one-digit divisors, divide 6,125 by 5. $6,125 \div 5 = 1,225$. A remainder means there was not enough left for one more full group.
- Use the setup first. For dividing by one-digit divisors, divide 8,461 by 7. $8,461 \div 7 = 1,208$ remainder 5. Use estimation to choose a quotient that is close before you divide exactly.
- Check the size of the answer. For dividing by one-digit divisors, divide 3,504 by 8. $3,504 \div 8 = 438$. Check division by multiplying the quotient back by the divisor.
- Match the operation to the words. For dividing by one-digit divisors, divide 2,917 by 9. $2,917 \div 9 = 324$ remainder 1. A remainder means there was not enough left for one more full group.
- Write the important values first. For dividing by one-digit divisors, divide 5,555 by 6. $5,555 \div 6 = 925$ remainder 5. Use estimation to choose a quotient that is close before you divide exactly.
- Follow the pattern carefully. For dividing by one-digit divisors, divide cookies equally: $2,346 \div 6 = 391$. Check division by multiplying the quotient back by the divisor.
- Start with the main idea. For dividing by one-digit divisors, divide the ribbon length by 9: $1,575 \div 9 = 175$ cm. A remainder means there was not enough left for one more full group.

Targeted Review

- ✓ Focused Grade 5 math practice by tested skill
- ✓ Clear question formats for steady review
- ✓ Useful for homework, tutoring, and test prep
- ✓ Helps students find gaps before test day

Review the essentials first.

7 Practice Tests

- ✓ 7 complete practice tests for realistic preparation
- ✓ Detailed explanations support independent study
- ✓ Aligned with the selected state or program
- ✓ Strong fit for students who need more test-style practice

Build test stamina with full practice.

Confidence Builder

- ✓ Mixes skill review with test-taking practice
- ✓ Helps parents and teachers track readiness
- ✓ Encourages consistent practice over time
- ✓ Gives students a clearer path to mastery

Practice with purpose.
