

Order of Operations

Grade 5 Math • Section 3.1

Name: _____

Date: _____

Score: _____ / 17

Quick Review and Helpful Hints

PEMDAS: Parentheses → Exponents → Multiplication & Division (left to right) → Addition & Subtraction (left to right).

Multiplication and division are done in the **same** step, working left to right. Same for addition and subtraction.

Always work inside parentheses first, then exponents, before multiplying or dividing.

Example: Evaluate $3 + 4 \times (8 - 2) \div 3$.

Parentheses first: $8 - 2 = 6$. Now the expression is $3 + 4 \times 6 \div 3$. Multiply: $4 \times 6 = 24$. Divide: $24 \div 3 = 8$. Add: $3 + 8 = 11$.

Answer: 11

Practice Problems

Evaluate each expression using the correct order of operations.

- | | | |
|--------------------------------------|--------------------------------------|---------------------------------------|
| 1. $6 + 3 \times 4 =$ _____ | 6. $9 + (12 - 4) \times 2 =$ _____ | 11. $100 - 5 \times 3^2 =$ _____ |
| 2. $20 - 8 \div 2 =$ _____ | 7. $5 \times 6 - 18 \div 3 =$ _____ | 12. $8 + 56 \div 7 - 2 =$ _____ |
| 3. $(5 + 3) \times 2 =$ _____ | 8. $(15 - 9) \times (2 + 4) =$ _____ | 13. $4 \times (9 - 3) + 10 =$ _____ |
| 4. $7 \times 2 + 5 \times 3 =$ _____ | 9. $3 + 2^3 \times 4 =$ _____ | 14. $60 \div 10 + 3 \times 5 =$ _____ |
| 5. $36 \div 6 + 4 =$ _____ | 10. $48 \div (4 + 4) =$ _____ | 15. $2^4 - 6 \times 2 + 1 =$ _____ |

Word Problems

16. Leo buys 3 books at \$8 each and 2 pens at \$3 each. Write a numerical expression and evaluate: $3 \times 8 + 2 \times 3$.

17. Maya says $2 + 3 \times 4 = 20$. Javier says the answer is 14. Who is correct? Explain using the order of operations.

Answer Keys

- | | |
|-------|----------------|
| 1. 18 | 10. 6 |
| 2. 16 | 11. 55 |
| 3. 16 | 12. 14 |
| 4. 29 | 13. 34 |
| 5. 10 | 14. 21 |
| 6. 25 | 15. 5 |
| 7. 24 | 16. \$30 |
| 8. 36 | 17. Javier; 14 |
| 9. 35 | |

Step-by-Step Explanations

- Start with the main idea. For order of operations, follow the order of operations in $6 + 3 \times 4$. The value is 18. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Keep the work tidy. For order of operations, follow the order of operations in $20 - 8 \div 2$. The value is 16. Work from the inside out when you see parentheses, brackets, or braces.
- Look at what the numbers mean. For order of operations, follow the order of operations in $(5 + 3) \times 2$. The value is 16. One careful line at a time is better than trying to do the whole expression mentally.
- Use the setup first. For order of operations, follow the order of operations in $7 \times 2 + 5 \times 3$. The value is 29. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Check the size of the answer. For order of operations, follow the order of operations in $36 \div 6 + 4$. The value is 10. Work from the inside out when you see parentheses, brackets, or braces.
- Match the operation to the words. For order of operations, follow the order of operations in $9 + (12 - 4) \times 2$. The value is 25. One careful line at a time is better than trying to do the whole expression mentally.
- Write the important values first. For order of operations, follow the order of operations in $5 \times 6 - 18 \div 3$. The value is 24. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Follow the pattern carefully. For order of operations, follow the order of operations in $(15 - 9) \times (2 + 4)$. The value is 36. Work from the inside out when you see parentheses, brackets, or braces.
- Start with the main idea. For order of operations, follow the order of operations in $3 + 2^3 \times 4$. The value is 35. One careful line at a time is better than

trying to do the whole expression mentally.

- Keep the work tidy. For order of operations, follow the order of operations in $48 \div (4 + 4)$. The value is 6. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Look at what the numbers mean. For order of operations, follow the order of operations in $100 - 5 \times 3^2$. The value is 55. Work from the inside out when you see parentheses, brackets, or braces.
- Use the setup first. For order of operations, follow the order of operations in $8 + 56 \div 7 - 2$. The value is 14. One careful line at a time is better than trying to do the whole expression mentally.
- Check the size of the answer. For order of operations, follow the order of operations in $4 \times (9 - 3) + 10$. The value is 34. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Match the operation to the words. For order of operations, follow the order of operations in $60 \div 10 + 3 \times 5$. The value is 21. Work from the inside out when you see parentheses, brackets, or braces.
- Write the important values first. For order of operations, follow the order of operations in $2^4 - 6 \times 2 + 1$. The value is 5. One careful line at a time is better than trying to do the whole expression mentally.
- Follow the pattern carefully. For order of operations, evaluate $3 \times 8 + 2 \times 3 = 24 + 6 = 30$. Grouped expressions come first, then exponents, then multiplication or division before addition or subtraction.
- Start with the main idea. For order of operations, multiplication comes before addition: $2 + 3 \times 4 = 2 + 12 = 14$. Work from the inside out when you see parentheses, brackets, or braces.

Want Even More Practice?

Check Out Our Other Tennessee TCAP Test Books!

Tennessee TCAP Grade 5 Math Preparation Bundle

18 full-length practice tests across three books
(5 + 6 + 7)

No repeated questions—maximum practice value!

18 Tests!
3 Books
One Bundle

Important: All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for TCAP test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

Start your practice journey!

6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

Take your practice to the next level!

7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 5
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

Go all the way with comprehensive practice!
