

# Word Problems: Dividing with Unit Fractions

Grade 5 Math • Section 6.3

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_ / 10

## Quick Review and Helpful Hints

👉 **Two types:** (1) **Unit fraction ÷ whole number:**  $\frac{1}{b} \div c = \frac{1}{bc}$  (sharing a piece equally).

(2) **Whole number ÷ unit fraction:**  $c \div \frac{1}{b} = cb$  (how many pieces fit).

💡 Read carefully to determine which type applies. "Split  $\frac{1}{4}$  among 3" → type 1. "How many  $\frac{1}{4}$ 's in 3?" → type 2.

🔍 **Example:** A carpenter has  $\frac{1}{2}$  yard of wood. He cuts it into 4 equal pieces. How long is each piece?

👉 This is type 1: unit fraction ÷ whole number.  $\frac{1}{2} \div 4 = \frac{1}{8}$  yard per piece.

💡 **Answer:**  $\frac{1}{8}$  yard

## Practice Problems

Solve each word problem. Show your work.

- A recipe uses  $\frac{1}{3}$  cup of oil. You want to split this equally into 5 batches. How much oil per batch?  
\_\_\_\_\_
- A roll of ribbon is 8 meters long. Each bow uses  $\frac{1}{4}$  meter. How many bows can be made?  
\_\_\_\_\_
- A  $\frac{1}{6}$ -acre garden plot is divided equally among 3 families. How much land does each family get?  
\_\_\_\_\_
- A marathon runner drinks 4 liters of water during a race. Each sip is  $\frac{1}{8}$  liter. How many sips does the runner take?  
\_\_\_\_\_
- Jake has  $\frac{1}{2}$  of a pizza. He shares it with 5 friends equally. What fraction of the whole pizza does each friend get?  
\_\_\_\_\_
- A farmer has 10 acres of land. Each row of corn takes  $\frac{1}{5}$  acre. How many rows can the farmer plant?  
\_\_\_\_\_
- A  $\frac{1}{4}$ -pound bag of seeds is split into 8 packets. How much does each packet weigh?  
\_\_\_\_\_
- A wire is 6 meters long. It is cut into pieces that are each  $\frac{1}{3}$  meter long. How many pieces are there?  
\_\_\_\_\_

## Word Problems

- A tank holds  $\frac{1}{5}$  of a gallon. It is poured equally into 4 cups. How much is in each cup? If you had 3 full tanks, how many cups could you fill?  
\_\_\_\_\_
- A school cafeteria has 9 gallons of milk. Each serving glass holds  $\frac{1}{6}$  gallon. How many glasses can be filled? If 48 students each take one glass, how many gallons of milk are left?  
\_\_\_\_\_

## Answer Keys

- |                                                                                                                                                |                                                                                                                                                     |

### Step-by-Step Explanations

1. Start with the main idea. For dividing with unit fractions,  $\frac{1}{3} \div 5 = \frac{1}{15}$ . Fractions are easier to combine when the pieces are the same size.
2. Keep the work tidy. For dividing with unit fractions,  $8 \div \frac{1}{4} = 8 \times 4 = 32$  bows. Always simplify at the end so the answer is clean and useful.
3. Look at what the numbers mean. For dividing with unit fractions,  $\frac{1}{6} \div 3 = \frac{1}{18}$ . For mixed numbers, converting to improper fractions can make the arithmetic calmer.
4. Use the setup first. For dividing with unit fractions,  $4 \div \frac{1}{8} = 4 \times 8 = 32$  sips. Fractions are easier to combine when the pieces are the same size.
5. Check the size of the answer. For dividing with unit fractions,  $\frac{1}{2} \div 5 = \frac{1}{10}$  of the pizza. Always simplify at the end so the answer is clean and useful.
6. Match the operation to the words. For dividing with unit fractions,  $10 \div \frac{1}{5} = 10 \times 5 = 50$  rows. For mixed numbers, converting to improper fractions can make the arithmetic calmer.
7. Write the important values first. For dividing with unit fractions,  $\frac{1}{4} \div 8 = \frac{1}{32}$ . Fractions are easier to combine when the pieces are the same size.
8. Follow the pattern carefully. For dividing with unit fractions,  $6 \div \frac{1}{3} = 18$  pieces. Always simplify at the end so the answer is clean and useful.
9. Start with the main idea. For dividing with unit fractions,  $\frac{1}{5} \div 4 = \frac{1}{20}$ . Three tanks hold  $\frac{3}{5}$  gallon;  $\frac{3}{5} \div \frac{1}{20} = 12$  cups. For mixed numbers, converting to improper fractions can make the arithmetic calmer.
10. Keep the work tidy. For dividing with unit fractions,  $9 \div \frac{1}{6} = 54$  glasses. After 48 glasses, 6 glasses remain, which is  $6 \times \frac{1}{6} = 1$  gallon. Fractions are easier to combine when the pieces are the same size.

# Want Even More Practice?

Check Out Our Other Michigan M-STEP Test Books!

## Michigan M-STEP Grade 5 Math Preparation Bundle

18 full-length practice tests across three books  
(5 + 6 + 7)

No repeated questions—maximum practice value!

**18 Tests!**  
**3 Books**  
**One Bundle**

**Important:** All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

### 5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for M-STEP test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

**Start your practice journey!**

### 6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

**Take your practice to the next level!**

### 7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 5
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

**Go all the way with comprehensive practice!**
