# Word Problems: Multiplying Fractions

Grade 5 Math • Section 5.6

| Name: _____ | Date: _____ | Score: _____ / 10 |
|---|---|---|

## Quick Review and Helpful Hints

**Clue words for multiplication:** "of," "each," "per," "part of a group." "$\frac{1}{3}$ of $12$" means $\frac{1}{3} \times 12$.

Draw a picture or model if the problem involves finding a fraction **of** a fraction.

Always simplify your final answer and make sure it is reasonable.

**Example:** A painter can finish $\frac{3}{5}$ of a wall per hour. How much of the wall can he paint in $\frac{1}{2}$ hour?

"$\frac{1}{2}$ of $\frac{3}{5}$" $= \frac{1}{2} \times \frac{3}{5} = \frac{3}{10}$ of the wall.

**Answer:** $\frac{3}{10}$ of the wall

## Practice Problems

*Solve each word problem. Show your work.*

1. A park covers $\frac{3}{4}$ of a square mile. A pond covers $\frac{2}{5}$ of the park. What fraction of a square mile is the pond?

2. A roll of fabric is $12$ yards long. A tailor uses $\frac{5}{8}$ of the roll. How many yards did the tailor use?

3. Maria reads $\frac{2}{3}$ of a book on Monday. On Tuesday she reads $\frac{1}{4}$ of what is left. What fraction of the whole book did she read on Tuesday?

4. A brownie recipe uses $1\frac{1}{2}$ cups of sugar. Jen wants to make $\frac{2}{3}$ of the recipe. How much sugar does she need?

5. A field is $4\frac{1}{3}$ acres. A farmer plants corn on $\frac{3}{4}$ of the field. How many acres of corn are planted?

6. There are $30$ students in a class. $\frac{2}{5}$ are on the soccer team. Of those, $\frac{1}{4}$ are goalkeepers. How many goalkeepers are there?

7. A rectangular garden is $\frac{3}{4}$ yard wide and $\frac{5}{6}$ yard long. What is the area in square yards?

8. A car travels $55$ miles per hour. How far does it go in $\frac{3}{4}$ of an hour?

## Word Problems

9. A pool is $\frac{4}{5}$ full. After a hot day, $\frac{1}{3}$ of the water evaporates. What fraction of the pool's capacity remains?

10. A school has $240$ students. $\frac{3}{8}$ of them play a sport. Of those, $\frac{2}{3}$ play soccer. How many students play soccer?

# Answer Keys

1. $\frac{3}{10}$
2. $7\frac{1}{2}$ yd
3. $\frac{1}{12}$
4. $1$ cup
5. $3\frac{1}{4}$ acres
6. $3$
7. $\frac{5}{8}$ yd$^2$
8. $41\frac{1}{4}$ mi
9. $\frac{8}{15}$
10. $60$

## Step-by-Step Explanations

**1.** Start with the main idea. For multiplying fractions, the pond is $\frac{2}{5}$ of $\frac{3}{4}$: $\frac{3}{4} \times \frac{2}{5} = \frac{3}{10}$. Fractions are easier to combine when the pieces are the same size.

**2.** Keep the work tidy. For multiplying fractions, $\frac{5}{8} \times 12 = \frac{60}{8} = 7\frac{1}{2}$. Always simplify at the end so the answer is clean and useful.

**3.** Look at what the numbers mean. For multiplying fractions, after Monday, $\frac{1}{3}$ remains; Tuesday is $\frac{1}{4}$ of that, or $\frac{1}{12}$. For mixed numbers, converting to improper fractions can make the arithmetic calmer.

**4.** Use the setup first. For multiplying fractions, $\frac{2}{3}$ of $1\frac{1}{2}$ is $\frac{2}{3} \times \frac{3}{2} = 1$. Fractions are easier to combine when the pieces are the same size.

**5.** Check the size of the answer. For multiplying fractions, $4\frac{1}{3} \times \frac{3}{4} = \frac{13}{3} \times \frac{3}{4} = \frac{13}{4} = 3\frac{1}{4}$. Always simplify at the end so the answer is clean and useful.

**6.** Match the operation to the words. For multiplying fractions, $\frac{2}{5}$ of $30$ is $12$ soccer players; $\frac{1}{4}$ of $12$ is $3$. For mixed numbers, converting to improper fractions can make the arithmetic calmer.

**7.** Write the important values first. For multiplying fractions, area is $\frac{3}{4} \times \frac{5}{6} = \frac{15}{24} = \frac{5}{8}$. Fractions are easier to combine when the pieces are the same size.

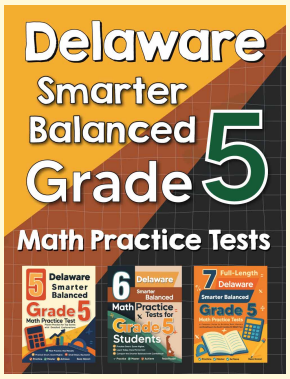
**8.** Follow the pattern carefully. For multiplying fractions, $55 \times \frac{3}{4} = \frac{165}{4} = 41\frac{1}{4}$. Always simplify at the end so the answer is clean and useful.

**9.** Start with the main idea. For multiplying fractions, if $\frac{1}{3}$ of the water evaporates, $\frac{2}{3}$ remains; $\frac{4}{5} \times \frac{2}{3} = \frac{8}{15}$. For mixed numbers, converting to improper fractions can make the arithmetic calmer.

**10.** Keep the work tidy. For multiplying fractions, $\frac{3}{8}$ of $240$ is $90$ athletes; $\frac{2}{3}$ of $90$ is $60$ soccer players. Fractions are easier to combine when the pieces are the same size.

# Want Even More Practice?

## Check Out Our Other Delaware Smarter Balanced Test Books!



### Delaware Smarter Balanced Grade 5 Math Preparation Bundle

18 full-length practice tests across three books (5 + 6 + 7)

No repeated questions—maximum practice value!

**18 Tests!**
**3 Books**
**One Bundle**

**Important:** All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

### 5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for Smarter Balanced test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

**Start your practice journey!**

### 6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

**Take your practice to the next level!**

### 7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 5
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

**Go all the way with comprehensive practice!**
