

# Area of Circles Introduction

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

A **circle** is measured from its center. The **radius**  $r$  is the distance from the center to the edge, and the **diameter**  $d$  goes all the way across through the center, so  $d = 2r$  and  $r = \frac{d}{2}$ . The **area** of a circle is  $A = \pi \times r^2$ . In this section, use  $\pi \approx 3.14$ . The steps are: if you are given the diameter, first cut it in half to get the radius; then square the radius (multiply it by itself); then multiply by 3.14. Area is always in **square units**.

◇ **Example:** Find the area of a circle with a radius of 6 inches. Use  $\pi \approx 3.14$ .  
 ⇒ Use the formula  $A = \pi \times r^2$ . First square the radius:  $6^2 = 6 \times 6 = 36$ . Now multiply by 3.14:  $3.14 \times 36 = 113.04$ . Since the radius was measured in inches, the area is in square inches. Notice we square the radius *before* multiplying by  $\pi$ .

**Answer:** 113.04 in<sup>2</sup>

## PRACTICE
