

Area of Parallelograms and Trapezoids

Name: _____ Date: _____ Score: _____ / 24

Q Quick Review

A **parallelogram** has two pairs of parallel sides. Its area is $A = b \times h$, where b is the base and h is the height measured straight up from that base — not the slanted side. A **trapezoid** has exactly one pair of parallel sides, called b_1 and b_2 . Its area is $A = \frac{1}{2}(b_1 + b_2) \times h$: add the two parallel bases, multiply by the height, then take half. A good way to remember the trapezoid rule is that you are using the *average* of the two bases. Both areas are measured in **square units**.

◊ **Example:** Find the area of a trapezoid with parallel bases of 8 m and 14 m and a height of 6 m.
 ⇒ Use the trapezoid formula $A = \frac{1}{2}(b_1 + b_2) \times h$. First add the two parallel bases: $8 + 14 = 22$. Next multiply by the height: $22 \times 6 = 132$. Finally take half: $\frac{1}{2} \times 132 = 66$. Since the measurements are in meters, the area is in square meters.

Answer: 66 m²

PRACTICE

Find the area of each figure. Parallelograms give base and height; trapezoids give both bases and height.

◆ Word Problems

21. A wooden deck is shaped like a parallelogram with a base of 16 feet and a height of 9 feet. What is the area of the deck?

22. A tabletop is shaped like a trapezoid. The two parallel edges measure 20 inches and 30 inches, and the distance between them is 12 inches. What is the area of the tabletop?

23. A parking space is shaped like a parallelogram with a base of 24 feet and a height of 18 feet. How many square feet of pavement does the space cover?

24. A vegetable garden is shaped like a trapezoid with parallel sides of 10 m and 16 m and a height of 8 m. What is the area of the garden?
