

# Area of Rectangles and Squares

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

The **area** of a shape is the amount of flat space it covers, measured in **square units**. For a **rectangle**, area equals **length times width**:  $A = l \times w$ . A **square** is just a rectangle whose sides are all equal, so its area is **side times side**:  $A = s \times s = s^2$ . Always include square units in your answer, like  $\text{cm}^2$  or  $\text{ft}^2$ . If side lengths are decimals or fractions, multiply them the same careful way — the formula never changes.

◊ **Example:** Find the area of a rectangle with length 8 cm and width 5 cm.  
 ⇒ For a rectangle, area is length times width. Here the length is 8 cm and the width is 5 cm, so multiply:  $8 \times 5 = 40$ . Because we multiplied centimeters by centimeters, the units become square centimeters. So the area is 40 square centimeters, written  $40 \text{ cm}^2$ .

**Answer:**  $40 \text{ cm}^2$

## PRACTICE

Find the area of each rectangle or square. Include square units.
