

Comparing and Ordering Rational Numbers

Name: _____

Date: _____

Score: _____ / 24

Q Quick Review

To compare two rational numbers, picture the **number line**: the number farther to the *right* is always **greater**. This means every positive number is greater than every negative number, and 0 sits in between. With two negatives, the one *closer to zero* is greater — so $-3 > -7$. To compare fractions or decimals, rewrite them in the same form (a common denominator, or all decimals) so the comparison is easy. Use $<$ for “less than,” $>$ for “greater than,” and $=$ for “equal to.”

◇ **Example:** Compare $-\frac{3}{4}$ and $-\frac{1}{2}$ using $<$ or $>$.

⇒ Both numbers are negative, so think about the number line. Let us give them a common denominator of 4: $-\frac{1}{2} = -\frac{2}{4}$, while $-\frac{3}{4}$ stays the same. Now compare $-\frac{3}{4}$ and $-\frac{2}{4}$. On the number line, $-\frac{3}{4}$ is farther left (farther from zero), so it is the smaller number. That means $-\frac{3}{4} < -\frac{1}{2}$.

Answer: $-\frac{3}{4} < -\frac{1}{2}$

Step-by-Step Explanations

- | | |
|---|--|
| <p>1. 9 is farther right on the number line, so $5 < 9$.</p> <p>2. Every negative number is less than every positive, so $-3 < 2$.</p> <p>3. With two negatives, the one closer to zero is greater: $-3 > -7$.</p> <p>4. -10 is farther from zero, so it is less: $-10 < -4$.</p> <p>5. Zero is greater than every negative number, so $0 > -6$.</p> <p>6. Every negative number is less than zero, so $-8 < 0$.</p> <p>7. Common denominator: $\frac{2}{4} < \frac{3}{4}$.</p> <p>8. Common denominator 6: $\frac{4}{6} > \frac{3}{6}$.</p> <p>9. $-\frac{2}{4} > -\frac{3}{4}$ since $-\frac{1}{2}$ is closer to zero.</p> <p>10. $-\frac{4}{6} > -\frac{5}{6}$, so $-\frac{2}{3}$ is greater.</p> <p>11. $0.50 > 0.45$ when you compare place by place.</p> <p>12. -0.5 is farther from zero than -0.05, so it is less.</p> <p>13. $\frac{3}{5} = 0.6$ exactly, so they are equal.</p> <p>14. $\frac{2}{3} \approx 0.667$, which is less than 0.7.</p> | <p>15. The same number is equal to itself: $-2 = -2$.</p> <p>16. $-\frac{7}{2} = -3.5$, which is less than -3.</p> <p>17. $\frac{9}{4} = 2.25$, which is greater than 2.</p> <p>18. -1.25 is closer to zero than -1.5, so it is greater.</p> <p>19. From left to right on the number line: -2, then 0, then 3.</p> <p>20. The most negative comes first: -5, then -3, then -1.</p> <p>21. $-8 < -3$ because -8 is farther from zero on the number line, so Tuesday was colder.</p> <p>22. Closest to the surface means closest to zero: -7 is highest, then -12, then -15 is deepest.</p> <p>23. Common denominator 15: $\frac{2}{3} = \frac{10}{15}$ and $\frac{3}{5} = \frac{9}{15}$. Since $\frac{9}{15} < \frac{10}{15}$, the $\frac{3}{5}$-second runner was closer.</p> <p>24. -20 is the most negative, then -15, and 5 is the only positive, so it is greatest.</p> |
