

# Decimal Place Value

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Quick Review

Every digit in a number has a **place value**. To the right of the decimal point, the places are **tenths**, **hundredths**, and **thousandths** — each place is 10 times smaller than the one before it. In 3.475, the 4 is in the tenths place (worth 0.4), the 7 is in the hundredths place (worth 0.07), and the 5 is in the thousandths place (worth 0.005). The **value** of a digit is the digit multiplied by its place. You can also write a decimal in **expanded form** by adding up the value of each digit.

◇ **Example:** What is the value of the digit 7 in 3.475?

⇒ First, name the place. Counting to the right of the decimal point: the first place is tenths, and the second place is hundredths. The 7 sits in the *second* place, so it is in the hundredths place. Its value is the digit times its place:  $7 \times \frac{1}{100} = \frac{7}{100}$ , which is 0.07.

**Answer:** 0.07 (hundredths)

### Step-by-Step Explanations

- |   |   |
|---|---|
| <p>1. The first spot after the decimal point is the tenths place.</p> <p>2. The second spot after the decimal point is the hundredths place.</p> <p>3. The third spot after the decimal point is the thousandths place.</p> <p>4. The 8 is one spot right of the decimal, so it is tenths.</p> <p>5. The 9 is two spots right of the decimal, so it is hundredths.</p> <p>6. The 5 is in the tenths place, so its value is 0.5.</p> <p>7. The 2 is in the hundredths place, so its value is 0.02.</p> <p>8. The 7 is in the thousandths place, so its value is 0.007.</p> <p>9. The 3 is in the tenths place, so its value is 0.3.</p> <p>10. The 4 is in the tenths place, so its value is 0.4.</p> <p>11. The 8 is in the hundredths place, so its value is 0.08.</p> <p>12. The 6 is in the thousandths place, so its value is 0.006.</p> <p>13. The 5 is in the tenths place, so its value is 0.5.</p> <p>14. The 9 is in the hundredths place, so its value is 0.09.</p> | <p>15. The 2 is in the thousandths place, so its value is 0.002.</p> <p>16. The 1 is three spots right of the decimal, so it is thousandths.</p> <p>17. The 7 is in the tenths place, so its value is 0.7.</p> <p>18. Tenths value 0.3 plus hundredths value 0.06 gives <math>0.3 + 0.06</math>.</p> <p>19. Add the value of each digit: <math>0.5 + 0.02 + 0.004</math>.</p> <p>20. The 3 is in the hundredths place, so its value is 0.03.</p> <p>21. Counting right of the decimal: tenths, then hundredths. The 8 is in the hundredths place, worth 0.08.</p> <p>22. The 7 is three places right of the decimal point, in the thousandths place, so its value is 0.007 gram.</p> <p>23. The 3 is worth 0.3 (tenths) and the 9 is worth 0.09 (hundredths), so <math>0.39 = 0.3 + 0.09</math>.</p> <p>24. The first place right of the decimal is tenths. The digit there is 1, so its value is 0.1 inch.</p> |
