Name: _____

Date: _____

Score: _____ / 24

Q Quick Review

To divide by a fraction, **multiply by its reciprocal**. The **reciprocal** of a fraction is that fraction flipped upside down — the reciprocal of $\frac{1}{2}$ is $\frac{2}{1}$. So $\frac{2}{3} \div \frac{1}{2}$ becomes $\frac{2}{3} \times \frac{2}{1}$. A helpful phrase is “**keep, change, flip**”: keep the first fraction, change \div to \times , and flip the second one. Then multiply as usual and **simplify**. Dividing by a fraction less than 1 gives a *bigger* answer — that is expected!

◇ **Example:** Divide $\frac{2}{3} \div \frac{1}{2}$.

⇒ Use “keep, change, flip.” **Keep** the first fraction $\frac{2}{3}$. **Change** the division to multiplication. **Flip** the second fraction: $\frac{1}{2}$ becomes $\frac{2}{1}$. Now multiply: $\frac{2}{3} \times \frac{2}{1} = \frac{4}{3}$. Converting to a mixed number, $\frac{4}{3} = 1\frac{1}{3}$.

Answer: $\frac{4}{3} = 1\frac{1}{3}$
