## Q Quick Review

A **budget** is a plan for how to use money: part for spending, part for saving. Percents help you split a budget — saving 25% of a \$200 allowance means setting aside  $0.25 \times 200 = \$50$ . To find **what percent** of a budget was spent, divide the amount spent by the total and multiply by 100. To reach a **savings goal**, divide the goal by how much you save each time: a \$300 goal at \$25 per week takes  $300 \div 25 = 12$  weeks. Planning ahead with rates and percents makes saving predictable.

◇ **Example:** Mia earns a \$200 monthly allowance and saves 25% of it. How much does she save?  
 ⇒ Saving 25% means setting aside 25 out of every 100 dollars. First, change 25% to a decimal:  $25\% = 0.25$ . The word “of” means multiply, so we compute  $0.25 \times 200 = 50$ . Mia saves \$50 each month. A nice check: 25% is one quarter, and one quarter of \$200 is \$50.

**Answer:** \$50
