

# Multiplying Mixed Numbers

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 24

## Q Quick Review

To multiply mixed numbers, **first change each one into an improper fraction**. For  $1\frac{1}{2}$ : multiply  $1 \times 2 = 2$ , add the 1 to get 3, so it becomes  $\frac{3}{2}$ . Then multiply the fractions the usual way — numerators times numerators, denominators times denominators. **Cancel** common factors to keep the numbers small if you can. Finally, **convert the answer back** to a mixed number and simplify. Never try to multiply the whole parts and fraction parts separately — that does not work!

◇ **Example:** Multiply  $1\frac{1}{2} \times 1\frac{1}{3}$ .

⇒ Turn each mixed number into an improper fraction. For  $1\frac{1}{2}$ :  $1 \times 2 + 1 = 3$ , so  $\frac{3}{2}$ . For  $1\frac{1}{3}$ :  $1 \times 3 + 1 = 4$ , so  $\frac{4}{3}$ . Now multiply across:  $\frac{3 \times 4}{2 \times 3} = \frac{12}{6}$ . Simplify:  $\frac{12}{6} = 2$ . So the product is exactly 2.

**Answer:** 2
