

Multiplying Mixed Numbers

Name: _____ Date: _____ Score: _____ / 24

Q Quick Review

To multiply mixed numbers, **first change each one into an improper fraction**. For $1\frac{1}{2}$: multiply $1 \times 2 = 2$, add the 1 to get 3, so it becomes $\frac{3}{2}$. Then multiply the fractions the usual way — numerators times numerators, denominators times denominators. **Cancel** common factors to keep the numbers small if you can. Finally, **convert the answer back** to a mixed number and simplify. Never try to multiply the whole parts and fraction parts separately — that does not work!

◇ **Example:** Multiply $1\frac{1}{2} \times 1\frac{1}{3}$.

⇒ Turn each mixed number into an improper fraction. For $1\frac{1}{2}$: $1 \times 2 + 1 = 3$, so $\frac{3}{2}$. For $1\frac{1}{3}$: $1 \times 3 + 1 = 4$, so $\frac{4}{3}$. Now multiply across: $\frac{3 \times 4}{2 \times 3} = \frac{12}{6}$. Simplify: $\frac{12}{6} = 2$. So the product is exactly 2.

Answer: 2
