

Nets and Surface Area

Q Quick Review

A **net** is a flat pattern that folds up to make a solid figure. The net of a rectangular prism shows all 6 rectangular faces unfolded. The **surface area** is the total area of all those faces added together. A rectangular prism has 3 pairs of matching faces, so $SA = 2(lw + lh + wh)$: find the area of the three different faces, add them, then double. A **cube** has 6 identical square faces, so $SA = 6s^2$. Surface area is measured in **square units**, because you are covering the outside of the solid.

◇ **Example:** Find the surface area of a rectangular prism with length 6 cm, width 4 cm, and height 5 cm.

⇒ Use $SA = 2(lw + lh + wh)$. Find the three different face areas first: $lw = 6 \times 4 = 24$, $lh = 6 \times 5 = 30$, and $wh = 4 \times 5 = 20$. Add those together: $24 + 30 + 20 = 74$. Each face has a matching partner on the opposite side, so double the total: $2 \times 74 = 148$. The surface area is in square centimeters.

Answer: 148 cm²

PRACTICE

Find the surface area of each solid. Cubes give one side length; prisms give length, width, and height.

◆ Word Problems

21. A gift box is a cube with each side 8 inches long. How many square inches of wrapping paper are needed to cover it exactly?

22. A storage chest is a rectangular prism that is 20 cm long, 15 cm wide, and 10 cm tall. What is its surface area? _____
23. A fish tank is a rectangular prism 24 inches long, 12 inches wide, and 16 inches tall. The tank has no top. How many square inches of glass make up the bottom and four sides?

24. A number cube (die) has each edge measuring 5 mm. What is the total surface area of the cube?
