Q Quick Review

Percents and rates show up everywhere with money. A **discount** is a percent taken *off* a price: a \$50 item at 20% off saves $0.20 \times 50 = \$10$, so you pay \$40. **Sales tax** is a percent *added* to a price. A **tip** (or gratuity) is a percent of a bill added for service. A **unit price** ($\frac{\text{cost}}{\text{amount}}$) helps you compare deals. To find a percent of a money amount, change the percent to a decimal and multiply.

◊ **Example:** A meal costs \$40. How much is a 15% tip?

⇒ A tip is a percent of the bill, added on for good service. We need 15% of \$40. First change the percent to a decimal: $15\% = 0.15$. The word “of” means multiply, so $0.15 \times 40 = 6$. The tip is \$6. As a check, 10% of \$40 is \$4, and 15% should be a bit more — \$6 fits.

Answer: \$6
