

Volume of Rectangular Prisms

Name: _____

Date: _____

Score: _____ / 24

Q Quick Review

Volume is the amount of space inside a solid figure — how much it can hold. A **rectangular prism** is a box shape with a length, a width, and a height. To find its volume, multiply all three: $V = l \times w \times h$. You can also think of it as the area of the bottom layer times how many layers tall it is. Volume is measured in **cubic units**, like cubic inches (in^3) or cubic centimeters (cm^3), because you are filling space in three directions. The order you multiply in does not matter — you will get the same answer.

◇ **Example:** Find the volume of a rectangular prism with a length of 8 cm, a width of 5 cm, and a height of 3 cm.
 ⇒ Use the formula $V = l \times w \times h$. Start by multiplying the length and width: $8 \times 5 = 40$ — that is the area of the bottom of the box. Now multiply by the height to stack up the layers: $40 \times 3 = 120$. Because we measured in centimeters, the volume is in cubic centimeters.

Answer: 120 cm^3
