Distance with the Pythagorean Theorem

Name: _____	Date: _____	Score: _____ / 24

Quick Review

To find the distance between two points on the coordinate plane, picture a right triangle: the *horizontal* change is one leg and the *vertical* change is the other leg, and the distance you want is the **hypotenuse**. The **distance formula** comes straight from the Pythagorean Theorem: $d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$. Find how far apart the x-values are, find how far apart the y-values are, square both, add, and take the square root. The order of subtraction doesn't matter because you square the result anyway.

◇ **Example:** Find the distance between $A(1, 2)$ and $B(4, 6)$.

⇒ Think of a right triangle connecting the two points. The horizontal leg is the change in x: $4 - 1 = 3$. The vertical leg is the change in y: $6 - 2 = 4$. Now use the Pythagorean Theorem: $d = \sqrt{3^2 + 4^2} = \sqrt{9 + 16} = \sqrt{25} = 5$. The two points are 5 units apart.

Answer: $d = 5$

PRACTICE

Find the distance between the two points.

1. $(0, 0)$ and $(3, 4)$ _____
2. $(0, 0)$ and $(6, 8)$ _____
3. $(0, 0)$ and $(5, 12)$ _____
4. $(0, 0)$ and $(9, 12)$ _____
5. $(1, 1)$ and $(4, 5)$ _____
6. $(2, 3)$ and $(10, 9)$ _____
7. $(-2, -3)$ and $(1, 1)$ _____
8. $(-3, -2)$ and $(9, 3)$ _____
9. $(3, 4)$ and $(15, 9)$ _____
10. $(-1, 4)$ and $(5, -4)$ _____
11. $(-4, -1)$ and $(4, 5)$ _____
12. $(2, -3)$ and $(10, 3)$ _____
13. $(0, 0)$ and $(8, 15)$ _____
14. $(1, 2)$ and $(8, 26)$ _____
15. $(5, 5)$ and $(5, 12)$ _____
16. $(-3, 4)$ and $(6, 4)$ _____
17. $(0, 0)$ and $(2, 2)$ _____
18. $(1, 1)$ and $(4, 2)$ _____
19. $(-2, 1)$ and $(1, 5)$ _____
20. $(6, 2)$ and $(2, -1)$ _____

Word Problems

21. On a city map, the library is at $(2, 3)$ and the school is at $(10, 9)$, where each unit is one block. How many blocks apart are they in a straight line? _____

22. A drone takes off from $(0, 0)$ on a grid and lands at $(9, 12)$, where each unit is 1 meter. How far did it travel in a straight line? _____

23. Two ships are tracked on a radar grid. One is at $(-3, -2)$ and the other at $(9, 3)$, with each unit equal to 1 nautical mile. How far apart are the ships? _____

24. A hiker walks from a trailhead at $(1, 2)$ to a lookout at $(8, 26)$ on a map where each unit is 100 feet. What is the straight-line distance in feet? _____

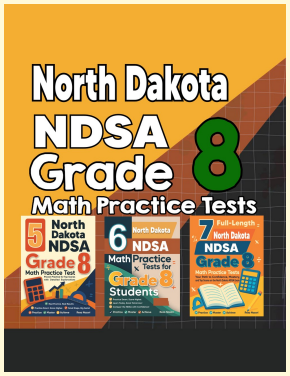
Answer Keys

1. $\boxed{5}$
2. $\boxed{10}$
3. $\boxed{13}$
4. $\boxed{15}$
5. $\boxed{5}$
6. $\boxed{10}$
7. $\boxed{5}$
8. $\boxed{13}$
9. $\boxed{13}$
10. $\boxed{10}$
11. $\boxed{10}$
12. $\boxed{10}$
13. $\boxed{17}$
14. $\boxed{25}$
15. $\boxed{7}$
16. $\boxed{9}$
17. $\boxed{2\sqrt{2}}$
18. $\boxed{\sqrt{10}}$
19. $\boxed{5}$
20. $\boxed{5}$
21. $\boxed{10 \text{ blocks}}$
22. $\boxed{15 \text{ meters}}$
23. $\boxed{13 \text{ nautical miles}}$
24. $\boxed{2500 \text{ feet}}$

Step-by-Step Explanations

1. Legs 3 and 4: $\sqrt{9+16} = \sqrt{25} = 5$.
2. Legs 6 and 8: $\sqrt{36+64} = \sqrt{100} = 10$.
3. Legs 5 and 12: $\sqrt{25+144} = \sqrt{169} = 13$.
4. Legs 9 and 12: $\sqrt{81+144} = \sqrt{225} = 15$.
5. Legs 3 and 4: $\sqrt{9+16} = \sqrt{25} = 5$.
6. Legs 8 and 6: $\sqrt{64+36} = \sqrt{100} = 10$.
7. Legs 3 and 4: $\sqrt{9+16} = \sqrt{25} = 5$.
8. Legs 12 and 5: $\sqrt{144+25} = \sqrt{169} = 13$.
9. Legs 12 and 5: $\sqrt{144+25} = \sqrt{169} = 13$.
10. Legs 6 and 8: $\sqrt{36+64} = \sqrt{100} = 10$.
11. Legs 8 and 6: $\sqrt{64+36} = \sqrt{100} = 10$.
12. Legs 8 and 6: $\sqrt{64+36} = \sqrt{100} = 10$.
13. Legs 8 and 15: $\sqrt{64+225} = \sqrt{289} = 17$.
14. Legs 7 and 24: $\sqrt{49+576} = \sqrt{625} = 25$.
15. Same x, so the distance is just the vertical change: $12 - 5 = 7$.
16. Same y, so the distance is the horizontal change: $6 - (-3) = 9$.
17. Legs 2 and 2: $\sqrt{4+4} = \sqrt{8} = 2\sqrt{2}$.
18. Legs 3 and 1: $\sqrt{9+1} = \sqrt{10}$.
19. Legs 3 and 4: $\sqrt{9+16} = \sqrt{25} = 5$.
20. Legs 4 and 3: $\sqrt{16+9} = \sqrt{25} = 5$.
21. The horizontal change is 8 and the vertical change is 6, so the distance is $\sqrt{8^2+6^2} = \sqrt{100} = 10$ blocks.
22. The legs are 9 and 12, so the straight-line distance is $\sqrt{9^2+12^2} = \sqrt{225} = 15$ m.
23. The horizontal change is 12 and the vertical change is 5, so the distance is $\sqrt{12^2+5^2} = \sqrt{169} = 13$ nautical miles.
24. The legs are 7 and 24, so the grid distance is $\sqrt{49+576} = \sqrt{625} = 25$ units. Each unit is 100 ft, so that is $25 \times 100 = 2500$ ft.

Want Even More Practice? Check Out Our Other North Dakota NDSA Test Books!



North Dakota NDSA Grade 8 Math Preparation Bundle

18 full-length practice tests across three books (5 + 6 + 7)

No repeated questions—maximum practice value!

18 Tests!
3 Books
One Bundle

Important: All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for NDSA test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

Start your practice journey!

6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

Take your practice to the next level!

7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 8
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

Go all the way with comprehensive practice!
