

Interior Angles of Polygons

Name: _____ Date: _____ Score: _____ / 24

Q Quick Review

For any polygon with n sides, the **interior angles add up to** $(n - 2) \times 180^\circ$. The idea: you can split the polygon into $(n - 2)$ triangles, and each triangle contributes 180° . If the polygon is **regular** (all sides and angles equal), each interior angle is the total divided by n : $\frac{(n-2) \times 180^\circ}{n}$. The **exterior angles** of any polygon always add to 360° , so each exterior angle of a regular polygon is $\frac{360^\circ}{n}$.

◇ **Example:** Find the sum of the interior angles of a hexagon (6 sides).
 ⇒ The formula for the sum of interior angles is $(n - 2) \times 180^\circ$. A hexagon has $n = 6$ sides, so first compute $n - 2 = 6 - 2 = 4$. That tells us the hexagon splits into 4 triangles. Now multiply by 180° : $4 \times 180^\circ = 720^\circ$. So all six interior angles together measure 720° .

Answer: 720°

PRACTICE

Find the requested angle sum or angle measure.

- | | | | |
|---|-------|--|-------|
| 1. Interior angle sum: triangle | _____ | 12. Each interior angle: regular hexagon | _____ |
| 2. Interior angle sum: quadrilateral | _____ | 13. Each interior angle: regular octagon | _____ |
| 3. Interior angle sum: pentagon | _____ | 14. Each interior angle: regular 12-gon | _____ |
| 4. Interior angle sum: hexagon | _____ | 15. Each interior angle: regular nonagon | _____ |
| 5. Interior angle sum: heptagon (7 sides) | _____ | 16. Each exterior angle: regular hexagon | _____ |
| 6. Interior angle sum: octagon | _____ | 17. Each exterior angle: regular octagon | _____ |
| 7. Interior angle sum: nonagon (9 sides) | _____ | 18. Each exterior angle: regular decagon | _____ |
| 8. Interior angle sum: decagon (10 sides) | _____ | 19. Quadrilateral with angles $90^\circ, 100^\circ, 80^\circ, ?$ | _____ |
| 9. Interior angle sum: 12-gon | _____ | 20. Pentagon with four angles $100^\circ, 110^\circ, 120^\circ, 90^\circ, ?$ | _____ |
| 10. Interior angle sum: 15-gon | _____ | | |
| 11. Each interior angle: regular pentagon | _____ | | |

◆ Word Problems

21. A stop sign is a regular octagon. What is the measure of each of its interior angles? _____
22. A floor tile is a regular hexagon. Three hexagonal tiles meet at a point. Show that they fit perfectly with no gap. _____
23. A quadrilateral window has angles of $85^\circ, 95^\circ, \text{ and } 100^\circ$. What is the measure of its fourth angle? _____
24. A regular polygon has each interior angle equal to 150° . How many sides does it have? _____

Answer Keys

- | | |
|---|--|
| <p>1. 180°</p> <p>2. 360°</p> <p>3. 540°</p> <p>4. 720°</p> <p>5. 900°</p> <p>6. 1080°</p> <p>7. 1260°</p> <p>8. 1440°</p> <p>9. 1800°</p> <p>10. 2340°</p> <p>11. 108°</p> <p>12. 120°</p> | <p>13. 135°</p> <p>14. 150°</p> <p>15. 140°</p> <p>16. 60°</p> <p>17. 45°</p> <p>18. 36°</p> <p>19. 90°</p> <p>20. 120°</p> <p>21. 135°</p> <p>22. Yes; $3 \times 120^\circ = 360^\circ$</p> <p>23. 80°</p> <p>24. 12 sides</p> |
|---|--|

Step-by-Step Explanations

- | | |
|---|--|
| <p>1. $(3 - 2) \times 180 = 180^\circ$.</p> <p>2. $(4 - 2) \times 180 = 360^\circ$.</p> <p>3. $(5 - 2) \times 180 = 540^\circ$.</p> <p>4. $(6 - 2) \times 180 = 720^\circ$.</p> <p>5. $(7 - 2) \times 180 = 900^\circ$.</p> <p>6. $(8 - 2) \times 180 = 1080^\circ$.</p> <p>7. $(9 - 2) \times 180 = 1260^\circ$.</p> <p>8. $(10 - 2) \times 180 = 1440^\circ$.</p> <p>9. $(12 - 2) \times 180 = 1800^\circ$.</p> <p>10. $(15 - 2) \times 180 = 2340^\circ$.</p> <p>11. $540 \div 5 = 108^\circ$.</p> <p>12. $720 \div 6 = 120^\circ$.</p> <p>13. $1080 \div 8 = 135^\circ$.</p> <p>14. $1800 \div 12 = 150^\circ$.</p> | <p>15. $1260 \div 9 = 140^\circ$.</p> <p>16. $360 \div 6 = 60^\circ$.</p> <p>17. $360 \div 8 = 45^\circ$.</p> <p>18. $360 \div 10 = 36^\circ$.</p> <p>19. The sum is 360°: $360 - 90 - 100 - 80 = 90^\circ$.</p> <p>20. The sum is 540°: $540 - 100 - 110 - 120 - 90 = 120^\circ$.</p> <p>21. The interior angle sum of an octagon is $(8 - 2) \times 180 = 1080^\circ$. Divided equally among 8 angles, each is $1080 \div 8 = 135^\circ$.</p> <p>22. Each interior angle of a regular hexagon is $720 \div 6 = 120^\circ$. Three of them give $3 \times 120 = 360^\circ$, exactly a full turn, so they fit with no gap.</p> <p>23. A quadrilateral's interior angles sum to 360°, so the fourth angle is $360 - 85 - 95 - 100 = 80^\circ$.</p> <p>24. Each exterior angle is $180 - 150 = 30^\circ$. Since exterior angles total 360°, the number of sides is $360 \div 30 = 12$.</p> |

Want Even More Practice? Check Out Our Other Connecticut SBAC Test Books!

Connecticut SBAC Grade 8 Math Preparation Bundle

18 full-length practice tests across three books
(5 + 6 + 7)

No repeated questions—maximum practice value!

18 Tests!
3 Books
One Bundle

Important: All our test books contain **unique, completely different tests** from each other! Each book offers fresh practice questions—no repeats!

5 Practice Tests

- ✓ 5 complete practice tests with detailed explanations
- ✓ Perfect foundation for SBAC test preparation
- ✓ Builds confidence and test-taking skills
- ✓ High-quality questions aligned with state standards

Start your practice journey!

6 Practice Tests

- ✓ 6 complete practice tests with detailed explanations
- ✓ **Unique tests**—different from the 5 tests book
- ✓ Perfect for more practice after mastering 5 tests
- ✓ Builds even more confidence and test-taking skills
- ✓ Same high-quality questions aligned with standards

Take your practice to the next level!

7 Practice Tests

- ✓ 7 complete practice tests for maximum preparation
- ✓ **Unique tests**—different from 5 and 6 tests books
- ✓ The most comprehensive practice for Grade 8
- ✓ Ideal for students aiming for top scores
- ✓ Extensive practice builds mastery and confidence

Go all the way with comprehensive practice!
