Quick Review

To **multiply** numbers in scientific notation, multiply the front numbers and *add* the exponents: $(a \times 10^m)(b \times 10^n) = ab \times 10^{m+n}$. To **divide**, divide the front numbers and *subtract* the exponents. To **add or subtract**, the powers of 10 must **match** first — rewrite one number so both share the same exponent, then combine the front numbers. After any operation, check that your front number is still between 1 and 10; if it is not, slide the decimal and adjust the exponent to fix it.

◊ **Example:** Multiply $(3 \times 10^4)(2 \times 10^5)$.

⇒ Think of it as two separate jobs. First, multiply the front numbers: $3 \times 2 = 6$. Next, handle the powers of ten by **adding** the exponents: $10^4 \times 10^5 = 10^{4+5} = 10^9$. Put the pieces back together: 6×10^9 . Last check — is 6 between 1 and 10? Yes, so we are done and the answer is already in proper form.

Answer: 6×10^9

Step-by-Step Explanations

- | | |
|--|--|
| <p>1. Multiply fronts $2 \cdot 4 = 8$, add exponents $3 + 2 = 5$.</p> <p>2. $3 \cdot 3 = 9$ and $5 + 4 = 9$, so 9×10^9.</p> <p>3. $5 \cdot 1 = 5$ and $6 + 2 = 8$.</p> <p>4. $4 \cdot 2 = 8$ and $-3 + 5 = 2$.</p> <p>5. $6 \cdot 1.5 = 9$ and $2 + 3 = 5$.</p> <p>6. $5 \cdot 4 = 20 = 2 \times 10^1$, so $2 \times 10^{1+4+3} = 2 \times 10^8$.</p> <p>7. $8 \cdot 5 = 40 = 4 \times 10^1$, then $4 \times 10^{1+6+2} = 4 \times 10^9$.</p> <p>8. Divide fronts $8 \div 2 = 4$, subtract exponents $9 - 3 = 6$.</p> <p>9. $9 \div 3 = 3$ and $7 - 2 = 5$.</p> <p>10. $6 \div 2 = 3$ and $5 - 8 = -3$.</p> <p>11. $4.8 \div 1.2 = 4$ and $6 - 2 = 4$.</p> <p>12. $1.5 \div 5 = 0.3$ and $4 - 6 = -2$; fix $0.3 \times 10^{-2} = 3 \times 10^{-3}$.</p> <p>13. The powers match, so just add the fronts: $2 + 3 = 5$.</p> <p>14. Same power, subtract fronts: $7 - 4 = 3$, giving 3×10^5.</p> | <p>15. $6 + 5 = 11$, so $11 \times 10^4 = 1.1 \times 10^5$ after fixing.</p> <p>16. Rewrite $2 \times 10^5 = 0.2 \times 10^6$, then $8 + 0.2 = 8.2$.</p> <p>17. Rewrite $3 \times 10^6 = 0.3 \times 10^7$, then $5 - 0.3 = 4.7$.</p> <p>18. Same power: $9 - 8 = 1$, so 1×10^3.</p> <p>19. $1.2 \cdot 3 = 3.6$ and $5 + (-2) = 3$.</p> <p>20. $7.2 \div 2.4 = 3$ and $-1 - 3 = -4$.</p> <p>21. Write $200 = 2 \times 10^2$. Multiply fronts $3 \cdot 2 = 6$ and add exponents $4 + 2 = 6$, giving 6×10^6 caps.</p> <p>22. Time is distance divided by speed. Divide fronts $9 \div 3 = 3$ and subtract exponents $20 - 4 = 16$, giving 3×10^{16} seconds.</p> <p>23. The powers of 10 already match, so just add the front numbers: $5 + 3 = 8$, giving 8×10^5 people.</p> <p>24. Both numbers share the power 10^8, so add the fronts: $7 + 2 = 9$. The total is 9×10^8 files.</p> |
