

Parallel Lines and Transversals

Name: _____ Date: _____ Score: _____ / 24

Q Quick Review

When a **transversal** (a line) crosses two **parallel lines**, it creates eight angles with neat relationships. **Corresponding angles** (same position at each crossing) are *equal*. **Alternate interior angles** (between the lines, opposite sides of the transversal) are *equal*. **Alternate exterior angles** (outside the lines, opposite sides) are *equal*. **Co-interior angles** (between the lines, same side) are *supplementary* — they add to 180° . Once you know one angle, you can find all the others.

◇ **Example:** Two parallel lines are cut by a transversal. One angle measures 70° . Find its co-interior (same-side interior) angle.
 ⇒ Co-interior angles sit between the two parallel lines, on the *same side* of the transversal. The rule is that they are *supplementary* — they add up to 180° . So if one is 70° , the other must be $180^\circ - 70^\circ = 110^\circ$. Check: $70 + 110 = 180$. That's the straight line they form together.

Answer: 110°

PRACTICE

Find the requested angle. Lines are parallel, cut by a transversal.

◆ Word Problems

21. A straight crosswalk cuts across two parallel street curbs. It makes a 68° angle with the first curb. What is the corresponding angle it makes with the second curb? _____
22. Two parallel shelves are joined by a diagonal brace. The brace makes a 115° co-interior angle on the top shelf. What is the co-interior angle it makes on the bottom shelf? _____
23. A transversal crosses two parallel lines. One alternate interior angle is labeled $4x$ and the other is 96° . Solve for x . _____
24. A road sign post crosses two parallel guide wires. The co-interior angles it forms are $2x$ and $7x$. Find x and both angle measures. _____

Yes — corresponding angles are always equal between parallel lines.</p> <p>21. Corresponding angles between parallel lines are equal, so the angle is also 68°.</p> <p>22. Co-interior angles are supplementary, so the angle is $180 - 115 = 65^\circ$.</p> <p>23. Alternate interior angles are equal, so $4x = 96$, giving $x = 24^\circ$.</p> <p>24. Co-interior angles add to 180°: $2x + 7x = 9x = 180$, so $x = 20^\circ$. The angles are $2(20) = 40^\circ$ and $7(20) = 140^\circ$.</p> |
