

Finding Slope

Name: _____ Date: _____ Score: _____ / 18

Quick Review and Helpful Hints

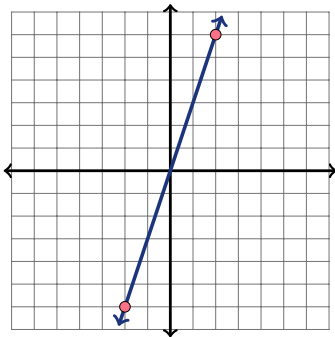

Slope measures steepness: $m = \frac{y_2 - y_1}{x_2 - x_1}$, or rise over run. Keep the subtraction order the same for y and x . Positive slopes rise, negative slopes fall, horizontal lines have slope 0, and vertical lines have undefined slope.

▶ **Example:** Find the slope of the line through (1, 2) and (4, 8). **Work:** Use the formula: $m = \frac{8-2}{4-1} = \frac{6}{3}$. Simplify the fraction. ★ **Answer:** $m = 2$

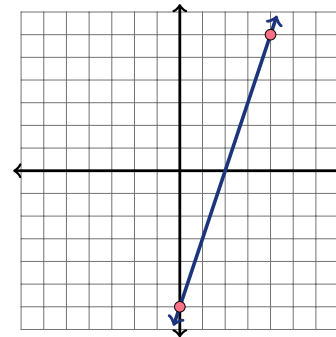

◆ **Practice Problems**

Find the slope. For graph questions, count rise over run; for point-pair questions, use the slope formula.

1. Use the graph to find the slope of the line.

2. Use the graph to find the slope of the line.

3. (2, 5) and (6, 5) _____

9. (3, 1) and (6, 7) _____

4. (0, 1) and (4, 9) _____

10. (1, 1) and (5, 3) _____

5. (1, 4) and (3, 0) _____

11. (-2, -3) and (2, 5) _____

6. (2, 3) and (5, 12) _____

12. (4, 2) and (4, 9) _____

7. (-1, 2) and (1, 6) _____

13. (0, 5) and (3, 5) _____

8. (0, 7) and (2, 1) _____

14. (2, 1) and (8, 5) _____

◆ **Word Problems**

15. A ramp rises 3 feet over a horizontal run of 12 feet. What is its slope? _____

17. A staircase rises 8 inches for every 10 inches forward. What is its slope? _____

16. A line passes through (2, 3) and (5, 12). Find its slope. _____

18. A road drops 50 feet over 200 horizontal feet. What is its slope? _____

Answer Keys

1. $\boxed{3}$

2. $\boxed{3}$

3. $\boxed{0}$

4. $\boxed{2}$

5. $\boxed{-2}$

6. $\boxed{3}$

7. $\boxed{2}$

8. $\boxed{-3}$

9. $\boxed{2}$

10. $\boxed{\frac{1}{2}}$

11. $\boxed{2}$

12. $\boxed{\text{undefined}}$

13. $\boxed{0}$

14. $\boxed{\frac{2}{3}}$

15. $\boxed{\frac{1}{4}}$

16. $\boxed{3}$

17. $\boxed{\frac{4}{5}}$

18. $\boxed{-\frac{1}{4}}$

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Graph: rise 6, run 2, so $m = 3$. So the final answer is 3.

2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Graph: rise 6, run 2, so $m = 3$. So the final answer is 3.

3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Matching y -values give rise 0: $m = \frac{0}{4} = 0$. So the final answer is 0.

4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{9-1}{4-0} = \frac{8}{4} = 2$. So the final answer is 2.

5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{0-4}{3-1} = \frac{-4}{2} = -2$. So the final answer is -2 .

6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{12-3}{5-2} = \frac{9}{3} = 3$. So the final answer is 3.

7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{6-2}{1-(-1)} = \frac{4}{2} = 2$. So the final answer is 2.

8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{1-7}{2-0} = \frac{-6}{2} = -3$. So the final answer is -3 .

9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{7-1}{6-3} = \frac{6}{3} = 2$. So the final answer is 2.

10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{3-1}{5-1} = \frac{2}{4} = \frac{1}{2}$. So the final answer is $\frac{1}{2}$.

11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{5-(-3)}{2-(-2)} = \frac{8}{4} = 2$. So the final answer is 2.

12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The x -values match, so the run is 0 and the slope is undefined. So the final answer is undefined.

13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Matching y -values give rise 0, so the slope is 0. So the final answer is 0.

14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{5-1}{8-2} = \frac{4}{6} = \frac{2}{3}$. So the final answer is $\frac{2}{3}$.

15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Slope $= \frac{3}{12} = \frac{1}{4}$. So the final answer is $\frac{1}{4}$.

16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $m = \frac{12-3}{5-2} = \frac{9}{3} = 3$. So the final answer is 3.

17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Slope $= \frac{8}{10} = \frac{4}{5}$. So the final answer is $\frac{4}{5}$.

18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The road drops, so rise is negative: $m = \frac{-50}{200} = -\frac{1}{4}$. So the final answer is $-\frac{1}{4}$.

Want Even More Pre-Algebra Practice?

The Ultimate Algebra Bundle: From Pre-Algebra to Algebra II

Prep books and workbooks for the full algebra path
Complete review, detailed explanations, and realistic practice

Pre-Algebra

Important: These Pre-Algebra resources are made for extra practice after the worksheet. Scan the QR code above for the complete algebra preparation bundle.

Skill Review

- ✓ Builds number sense, fractions, ratios, and early algebra skills
- ✓ Supports steady review before quizzes and tests
- ✓ Great for tutoring, homework, and independent practice

Build the foundation.

Skill Practice

- ✓ Worked examples that model each method
- ✓ Detailed answer explanations for every problem
- ✓ Useful after students finish topic worksheets

Practice with purpose.

Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps preparation organized and calm

Move forward prepared.

Pre-Algebra for Beginners

The Ultimate Step-by-Step Guide to Preparing for the Pre-Algebra Test

Written by a top math teacher and aligned with pre-algebra courses. From fractions and integers to ratios, percents, and first equations — explained the easy way.

- ✓ **Complete coverage** of every pre-algebra topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom

→ **DOWNLOAD INSTANTLY**

Instant PDF download

on any device

Pair these free worksheets with *Pre-Algebra for Beginners* and you have a complete self-paced pre-algebra path — concept lessons, daily practice, and full exam-style reviews. → [EffortlessMath.com](https://www.EffortlessMath.com)
