

Solving Two-Step Equations

Name: _____

Date: _____

Score: _____ / 18

Quick Review and Helpful Hints

A *two-step equation* takes two inverse operations to solve. First undo the addition or subtraction (move the constant), then undo the multiplication or division (free the variable). Always do the same thing to both sides.

▷ **Example:** Solve $2x + 3 = 11$. **Work:** Subtract 3 from both sides:
 $2x = 8$. Divide both sides by 2: $x = 4$.

★ **Answer:** $x = 4$

Undo $+3$, then undo $\times 2$.

◆ Practice Problems

Solve each equation.

1. $2x + 3 = 11$

8. $2x - 7 = -1$

2. $3x - 5 = 16$

9. $3x + 9 = 0$

3. $4x + 1 = 13$

10. $7x - 3 = 18$

4. $5x - 2 = 18$

11. $\frac{x}{4} + 3 = 5$

5. $\frac{x}{2} + 1 = 5$

12. $10 - 2x = 4$

6. $\frac{x}{3} - 2 = 1$

13. $-3x + 5 = 14$

7. $6x + 4 = 22$

14. $8x + 5 = 29$

◆ Word Problems

15. A taxi charges \$2 plus \$3 per mile. A ride costs \$14. How many miles was it?

16. You start with \$5 and add \$4 each week. After how many weeks do you have \$25?

17. Three more than four times a number is 19. Find the number.

18. A gym costs \$20 to join plus \$10 per month. The total is \$60. How many months?

Answer Keys

- | | | |
|------------|-------------|--------------|
| 1. $x = 4$ | 7. $x = 3$ | 13. $x = -3$ |
| 2. $x = 7$ | 8. $x = 3$ | 14. $x = 3$ |
| 3. $x = 3$ | 9. $x = -3$ | 15. 4 miles |
| 4. $x = 4$ | 10. $x = 3$ | 16. 5 weeks |
| 5. $x = 8$ | 11. $x = 8$ | 17. 4 |
| 6. $x = 9$ | 12. $x = 3$ | 18. 4 months |

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 3: $2x = 8$. Divide by 2: $x = 4$. So the final answer is $x = 4$.

2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 5: $3x = 21$. Divide by 3: $x = 7$. So the final answer is $x = 7$.

3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 1: $4x = 12$. Divide by 4: $x = 3$. So the final answer is $x = 3$.

4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 2: $5x = 20$. Divide by 5: $x = 4$. So the final answer is $x = 4$.

5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 1: $\frac{x}{2} = 4$. Multiply by 2: $x = 8$. So the final answer is $x = 8$.

6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 2: $\frac{x}{3} = 3$. Multiply by 3: $x = 9$. So the final answer is $x = 9$.

7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 4: $6x = 18$. Divide by 6: $x = 3$. So the final answer is $x = 3$.

8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 7: $2x = 6$. Divide by 2: $x = 3$. So the final answer is $x = 3$.

9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 9: $3x = -9$. Divide by 3: $x = -3$. So the final answer is $x = -3$.

10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 3: $7x = 21$. Divide by 7: $x = 3$. So the final answer is $x = 3$.

11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 3: $\frac{x}{4} = 2$. Multiply by 4: $x = 8$. So the final answer is $x = 8$.

12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 10: $-2x = -6$. Divide by -2 : $x = 3$. So the final answer is $x = 3$.

13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 5: $-3x = 9$. Divide by -3 : $x = -3$. So the final answer is $x = -3$.

14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 5: $8x = 24$. Divide by 8: $x = 3$. So the final answer is $x = 3$.

15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set up $3m + 2 = 14$. Subtract 2: $3m = 12$, so $m = 4$ miles. So the final answer is 4 miles.

16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set up $4w + 5 = 25$. Subtract 5: $4w = 20$, so $w = 5$ weeks. So the final answer is 5 weeks.

17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set up $4x + 3 = 19$. Subtract 3: $4x = 16$, so $x = 4$. So the final answer is 4.

18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set up $10m + 20 = 60$. Subtract 20: $10m = 40$, so $m = 4$ months. So the final answer is 4 months.

Want Even More Pre-Algebra Practice?

The Ultimate Algebra Bundle: From Pre-Algebra to Algebra II

Prep books and workbooks for the full algebra path
Complete review, detailed explanations, and realistic practice

Pre-Algebra
Algebra I
Algebra II

Important: These Pre-Algebra resources are made for extra practice after the worksheet. Scan the QR code above for the complete algebra preparation bundle.

Skill Review

- ✓ Builds number sense, fractions, ratios, and early algebra skills
- ✓ Supports steady review before quizzes and tests
- ✓ Great for tutoring, homework, and independent practice

Build the foundation.

Skill Practice

- ✓ Worked examples that model each method
- ✓ Detailed answer explanations for every problem
- ✓ Useful after students finish topic worksheets

Practice with purpose.

Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps preparation organized and calm

Move forward prepared.

Pre-Algebra for Beginners

The Ultimate Step-by-Step Guide to Preparing for the Pre-Algebra Test

Written by a top math teacher and aligned with pre-algebra courses. From fractions and integers to ratios, percents, and first equations — explained the easy way.

- ✓ **Complete coverage** of every pre-algebra topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom
