

# Simplifying Radicals

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 18

**Quick Review and Helpful Hints**

A square root  $\sqrt{a}$  asks “what nonnegative number squared gives  $a$ ?” To simplify, pull out the largest *perfect square* factor:  $\sqrt{a^2b} = a\sqrt{b}$ . Multiply or divide roots with  $\sqrt{a} \cdot \sqrt{b} = \sqrt{ab}$ . Combine *like* radicals (the same number under the root) by adding or subtracting their coefficients.

▶ **Example:** Simplify  $\sqrt{72}$ . **Work:** Factor out the largest perfect square:  $72 = 36 \cdot 2$ , and 36 is a perfect square. So  $\sqrt{72} = \sqrt{36} \cdot \sqrt{2} = 6\sqrt{2}$ .  
 ★ **Answer:**  $6\sqrt{2}$

$\sqrt{72} = 6\sqrt{2}$  is the side of a square of area 72.

◆ **Practice Problems**

Simplify each radical expression.

### Step-by-Step Explanations

**1.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Ask yourself “what number squared gives 49?” Since  $7 \times 7 = 49$ , the root is 7. So the final answer is 7.

**2.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Pull out the perfect-square factor:  $12 = 4 \cdot 3$ , so  $\sqrt{12} = \sqrt{4} \sqrt{3} = 2\sqrt{3}$ . So the final answer is  $2\sqrt{3}$ .

**3.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $50 = 25 \cdot 2$ , and 25 is a perfect square, so  $\sqrt{50} = 5\sqrt{2}$ . So the final answer is  $5\sqrt{2}$ .

**4.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $18 = 9 \cdot 2$ , so  $\sqrt{18} = 3\sqrt{2}$ . So the final answer is  $3\sqrt{2}$ .

**5.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $8 = 4 \cdot 2$ , giving  $\sqrt{8} = 2\sqrt{2}$ . So the final answer is  $2\sqrt{2}$ .

**6.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $45 = 9 \cdot 5$ , so  $\sqrt{45} = 3\sqrt{5}$ . So the final answer is  $3\sqrt{5}$ .

**7.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $100 = 10^2$  is a perfect square, so the root is exactly 10 with no radical left. So the final answer is 10.

**8.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The largest perfect-square factor of 32 is 16:  $\sqrt{32} = \sqrt{16} \sqrt{2} = 4\sqrt{2}$ . So the final answer is  $4\sqrt{2}$ .

**9.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $75 = 25 \cdot 3$ , so  $\sqrt{75} = 5\sqrt{3}$ . So the final answer is  $5\sqrt{3}$ .

**10.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply under one root first:  $\sqrt{2} \cdot \sqrt{8} = \sqrt{16} = 4$ . So the final answer is 4.

**11.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is These are like radicals (both  $\sqrt{5}$ ), so add the coefficients:  $3 + 2 = 5$ , giving  $5\sqrt{5}$ . So the final answer is  $5\sqrt{5}$ .

**12.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $200 = 100 \cdot 2$ , so  $\sqrt{200} = 10\sqrt{2}$ . So the final answer is  $10\sqrt{2}$ .

**13.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $27 = 9 \cdot 3$ , so  $\sqrt{27} = 3\sqrt{3}$ . So the final answer is  $3\sqrt{3}$ .

**14.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Combine under a single root:  $\sqrt{\frac{50}{2}} = \sqrt{25} = 5$ . So the final answer is 5.

**15.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The side of a square is the square root of its area:  $\sqrt{144} = 12$  feet. So the final answer is 12 ft.

**16.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Side =  $\sqrt{50} = \sqrt{25 \cdot 2} = 5\sqrt{2}$  meters. So the final answer is  $5\sqrt{2}$  m.

**17.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Side =  $\sqrt{32} = \sqrt{16 \cdot 2} = 4\sqrt{2}$  inches. So the final answer is  $4\sqrt{2}$  in.

**18.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Side =  $\sqrt{18} = \sqrt{9 \cdot 2} = 3\sqrt{2}$  centimeters. So the final answer is  $3\sqrt{2}$  cm.
