

# When an Expression Is Undefined

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 18

**Quick Review and Helpful Hints**

A fraction is *undefined* when its denominator equals 0, because dividing by zero is not allowed. To find where an expression is undefined, set the *denominator* equal to 0 and solve for  $x$ .

▶ **Example:** For what value of  $x$  is  $\frac{1}{x-2}$  undefined? **Work:** Set the denominator to 0:  $x - 2 = 0$ , so  $x = 2$ . ★ **Answer:**  $x = 2$

Never divide by zero.

◆ **Practice Problems**

Find where each expression is undefined.

| <p>1. <math>\frac{1}{x-2}</math> _____</p> <p>2. <math>\frac{1}{x+3}</math> _____</p> <p>3. <math>\frac{1}{x}</math> _____</p> <p>4. <math>\frac{5}{x-1}</math> _____</p> <p>5. <math>\frac{1}{x+5}</math> _____</p> <p>6. <math>\frac{2}{x-4}</math> _____</p> <p>7. <math>\frac{1}{2x}</math> _____</p> | <p>8. <math>\frac{1}{x-7}</math> _____</p> <p>9. <math>\frac{3}{x+1}</math> _____</p> <p>10. <math>\frac{1}{x-10}</math> _____</p> <p>11. <math>\frac{1}{x+2}</math> _____</p> <p>12. <math>\frac{4}{x-6}</math> _____</p> <p>13. Can you divide by 0? _____</p> <p>14. <math>\frac{1}{x}</math> undefined at _____</p> |
|---|---|

◆ **Word Problems**

15. A formula has  $x - 3$  in the denominator. Where is it undefined? \_\_\_\_\_
16. For what value is  $\frac{1}{x+4}$  undefined? \_\_\_\_\_
17. Why is  $\frac{5}{0}$  undefined? \_\_\_\_\_
18. At what value is  $\frac{1}{x-9}$  undefined? \_\_\_\_\_

## Answer Keys

1.  $x = 2$

2.  $x = -3$

3.  $x = 0$

4.  $x = 1$

5.  $x = -5$

6.  $x = 4$

7.  $x = 0$

8.  $x = 7$

9.  $x = -1$

10.  $x = 10$

11.  $x = -2$

12.  $x = 6$

13. No

14.  $x = 0$

15.  $x = 3$

16.  $x = -4$

17. division by zero

18.  $x = 9$

### Step-by-Step Explanations

1. Start by naming the process: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 2 = 0 \Rightarrow x = 2$ . So the final answer is  $x = 2$ .

2. A good way to think about this is: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x + 3 = 0 \Rightarrow x = -3$ . So the final answer is  $x = -3$ .

3. Step by step: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x = 0$  makes the bottom 0. So the final answer is  $x = 0$ .

4. Take it one move at a time: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 1 = 0 \Rightarrow x = 1$ . So the final answer is  $x = 1$ .

5. Start by naming the process: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x + 5 = 0 \Rightarrow x = -5$ . So the final answer is  $x = -5$ .

6. A good way to think about this is: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 4 = 0 \Rightarrow x = 4$ . So the final answer is  $x = 4$ .

7. Step by step: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $2x = 0 \Rightarrow x = 0$ . So the final answer is  $x = 0$ .

8. Take it one move at a time: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 7 = 0 \Rightarrow x = 7$ . So the final answer is  $x = 7$ .

9. Start by naming the process: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x + 1 = 0 \Rightarrow x = -1$ . So the final answer is  $x = -1$ .

10. A good way to think about this is: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 10 = 0 \Rightarrow x = 10$ . So the final answer is  $x = 10$ .

11. Step by step: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x + 2 = 0 \Rightarrow x = -2$ . So the final answer is  $x = -2$ .

12. Take it one move at a time: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 6 = 0 \Rightarrow x = 6$ . So the final answer is  $x = 6$ .

13. Start by naming the process: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is No - division by zero is undefined. So the final answer is No.

14. A good way to think about this is: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x = 0$  makes the bottom 0. So the final answer is  $x = 0$ .

15. Step by step: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 3 = 0 \Rightarrow x = 3$ . So the final answer is  $x = 3$ .

16. Take it one move at a time: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x + 4 = 0 \Rightarrow x = -4$ . So the final answer is  $x = -4$ .

17. Start by naming the process: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is The denominator is 0 (dividing by zero). So the final answer is division by zero.

18. A good way to think about this is: A fraction is undefined when its denominator is zero, so set the denominator equal to zero and solve. The setup/work is  $x - 9 = 0 \Rightarrow x = 9$ . So the final answer is  $x = 9$ .
