

Tips, Commissions, and Fees

Name: _____

Date: _____

Score: _____ / 18

Quick Review and Helpful Hints

A tip, commission, or fee is a *percent of an amount*. Multiply the amount by the percent (as a decimal). To find a *total* that includes a tip, add the tip to the original amount.

▷ **Example:** Find a 15% tip on a \$40 bill. **Work:** Change 15% to 0.15 and multiply by the bill: 0.15×40 .

★ **Answer:** \$6

Tip = percent of the bill.

◆ Practice Problems

Find each tip, commission, fee, or total.

- | | | | |
|---------------------------|-------|----------------------------|-------|
| 1. 15% tip on \$40 | _____ | 8. 20% tip on \$35 | _____ |
| 2. 20% tip on \$50 | _____ | 9. 15% tip on \$20 | _____ |
| 3. 10% tip on \$30 | _____ | 10. 6% commission on \$500 | _____ |
| 4. 5% commission on \$200 | _____ | 11. 10% tip on \$45 | _____ |
| 5. 10% fee on \$100 | _____ | 12. 8% fee on \$50 | _____ |
| 6. 18% tip on \$50 | _____ | 13. 30% commission on \$90 | _____ |
| 7. 25% commission on \$80 | _____ | 14. 20% tip on \$60 | _____ |

◆ Word Problems

15. A \$40 meal gets a 20% tip. Find the tip. _____
16. A salesperson earns 5% on \$2000 in sales. Find the commission. _____
17. A group has a \$60 dinner bill and agrees to leave a 15% tip before splitting the check. How much should they leave for the tip? _____
18. A \$50 service has a 10% fee added. Find the total cost. _____

Answer Keys

- | | | |
|---------|------------|-----------|
| 1. \$6 | 7. \$20 | 13. \$27 |
| 2. \$10 | 8. \$7 | 14. \$12 |
| 3. \$3 | 9. \$3 | 15. \$8 |
| 4. \$10 | 10. \$30 | 16. \$100 |
| 5. \$10 | 11. \$4.50 | 17. \$9 |
| 6. \$9 | 12. \$4 | 18. \$55 |

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 40 = \$6$. So the final answer is \$6.
2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 50 = \$10$. So the final answer is \$10.
3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 30 = \$3$. So the final answer is \$3.
4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.05 \times 200 = \$10$. So the final answer is \$10.
5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 100 = \$10$. So the final answer is \$10.
6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.18 \times 50 = \$9$. So the final answer is \$9.
7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.25 \times 80 = \$20$. So the final answer is \$20.
8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 35 = \$7$. So the final answer is \$7.
9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 20 = \$3$. So the final answer is \$3.
10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.06 \times 500 = \$30$. So the final answer is \$30.
11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 45 = \$4.50$. So the final answer is \$4.50.
12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.08 \times 50 = \$4$. So the final answer is \$4.
13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.30 \times 90 = \$27$. So the final answer is \$27.
14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 60 = \$12$. So the final answer is \$12.
15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 40 = \$8$. So the final answer is \$8.
16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.05 \times 2000 = \$100$. So the final answer is \$100.
17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 60 = \$9$. So the final answer is \$9.
18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $50 + 0.10 \times 50 = 50 + 5 = \55 . So the final answer is \$55.
