

# Multi-Step Equations

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_ / 18

## Quick Review and Helpful Hints

To solve, first simplify each side: clear parentheses with the distributive property and combine like terms. Then undo the operations in reverse order – add or subtract to move constants, and multiply or divide to free the variable. If the variable appears on both sides, move all variable terms to one side first.

▶ **Example:** Solve  $4(x - 2) + 6 = 18$ . **Work:** Distribute:  $4x - 8 + 6 = 18$ . Combine like terms:  $4x - 2 = 18$ . Add 2:  $4x = 20$ . Divide by 4:  $x = 5$ .  
★ **Answer:**  $x = 5$

Do the same to both sides to stay balanced.

## ◆ Practice Problems

Solve each equation for the variable.

1.  $2x + 3 = 11$

\_\_\_\_\_

2.  $3x - 5 = 16$

\_\_\_\_\_

3.  $5x + 2 = 22$

\_\_\_\_\_

4.  $4x - 7 = 9$

\_\_\_\_\_

5.  $2x + 3x = 20$

\_\_\_\_\_

6.  $7x - 2x = 15$

\_\_\_\_\_

7.  $2(x + 4) = 18$

\_\_\_\_\_

8.  $3(x - 1) = 12$

\_\_\_\_\_

9.  $2x + 5 = x + 9$

\_\_\_\_\_

10.  $5x - 3 = 2x + 9$

\_\_\_\_\_

11.  $4(x + 2) = 2x + 14$

\_\_\_\_\_

12.  $3x + 7 = 2(x + 5)$

\_\_\_\_\_

13.  $2(2x - 1) + 3 = 13$

\_\_\_\_\_

14.  $6x - 2(x - 1) = 14$

\_\_\_\_\_

## ◆ Word Problems

15. The sum of a number and 7, then doubled, is 26. Find the number.

\_\_\_\_\_

16. A taxi charges \$3 plus \$2 per mile. A ride costs \$17. How many miles was it?

\_\_\_\_\_

17. A rectangle's perimeter is 30. Its length is 3 more than its width. Find the width.

\_\_\_\_\_

18. Five less than three times a number is 16. Find the number.

\_\_\_\_\_

## Answer Keys

- |            |             |             |
|------------|-------------|-------------|
| 1. $x = 4$ | 7. $x = 5$  | 13. $x = 3$ |
| 2. $x = 7$ | 8. $x = 5$  | 14. $x = 3$ |
| 3. $x = 4$ | 9. $x = 4$  | 15. 6       |
| 4. $x = 4$ | 10. $x = 4$ | 16. 7 miles |
| 5. $x = 4$ | 11. $x = 3$ | 17. 6       |
| 6. $x = 3$ | 12. $x = 3$ | 18. 7       |

### Step-by-Step Explanations

**1.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 3 from both sides:  $2x = 8$ . Then divide by 2:  $x = 4$ . So the final answer is  $x = 4$ .

**2.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 5 to both sides:  $3x = 21$ . Divide by 3:  $x = 7$ . So the final answer is  $x = 7$ .

**3.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract 2:  $5x = 20$ . Divide by 5:  $x = 4$ . So the final answer is  $x = 4$ .

**4.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Add 7:  $4x = 16$ . Divide by 4:  $x = 4$ . So the final answer is  $x = 4$ .

**5.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Combine like terms first:  $5x = 20$ . Divide by 5:  $x = 4$ . So the final answer is  $x = 4$ .

**6.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Combine:  $5x = 15$ . Divide by 5:  $x = 3$ . So the final answer is  $x = 3$ .

**7.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute:  $2x + 8 = 18$ . Subtract 8:  $2x = 10$ . Divide by 2:  $x = 5$ . So the final answer is  $x = 5$ .

**8.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute:  $3x - 3 = 12$ . Add 3:  $3x = 15$ . Divide by 3:  $x = 5$ . So the final answer is  $x = 5$ .

**9.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract  $x$  from both sides:  $x + 5 = 9$ . Subtract 5:  $x = 4$ . So the final answer is  $x = 4$ .

**10.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract  $2x$ :  $3x - 3 = 9$ . Add 3:  $3x = 12$ . Divide by 3:  $x = 4$ . So the final answer is  $x = 4$ .

**11.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute:  $4x + 8 = 2x + 14$ . Subtract  $2x$ :  $2x + 8 = 14$ . Subtract 8:  $2x = 6$ , so  $x = 3$ . So the final answer is  $x = 3$ .

**12.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute the right side:  $3x + 7 = 2x + 10$ . Subtract  $2x$ :  $x + 7 = 10$ , so  $x = 3$ . So the final answer is  $x = 3$ .

**13.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute:  $4x - 2 + 3 = 13$ , so  $4x + 1 = 13$ . Subtract 1:  $4x = 12$ ,  $x = 3$ . So the final answer is  $x = 3$ .

**14.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Distribute the  $-2$ :  $6x - 2x + 2 = 14$ , so  $4x + 2 = 14$ . Subtract 2:  $4x = 12$ ,  $x = 3$ . So the final answer is  $x = 3$ .

**15.** Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is "Doubled" means  $2(x + 7) = 26$ . Divide by 2:  $x + 7 = 13$ . Subtract 7:  $x = 6$ . So the final answer is 6.

**16.** Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Cost is  $3 + 2m = 17$ . Subtract 3:  $2m = 14$ . Divide by 2:  $m = 7$  miles. So the final answer is 7 miles.

**17.** Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Perimeter:  $2(w + (w + 3)) = 30$ , so  $4w + 6 = 30$ . Then  $4w = 24$  and  $w = 6$ . So the final answer is 6.

**18.** A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is "Five less than three times a number" is  $3x - 5 = 16$ . Add 5:  $3x = 21$ , so  $x = 7$ . So the final answer is 7.
