

Equations with Variables on Both Sides

Name: _____ Date: _____ Score: _____ / 18

Quick Review and Helpful Hints

When the variable appears on *both* sides, first move all the variable terms to one side (subtract the smaller one from both sides) and the constants to the other side. Then solve the two-step equation that remains.

▷ **Example:** Solve $5x + 3 = 2x + 18$. **Work:** Subtract $2x$ from both sides: $3x + 3 = 18$. Subtract 3: $3x = 15$. Divide by 3: $x = 5$.

★ **Answer:** $x = 5$

Move variables to one side first.

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $2x$: $3x + 3 = 18$. Subtract 3: $3x = 15$, so $x = 5$. So the final answer is $x = 5$.
2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $2x$: $2x + 1 = 9$. Subtract 1: $2x = 8$, so $x = 4$. So the final answer is $x = 4$.
3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $3x$: $4x - 2 = 10$. Add 2: $4x = 12$, so $x = 3$. So the final answer is $x = 3$.
4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $4x$: $2x + 5 = 13$. Subtract 5: $2x = 8$, so $x = 4$. So the final answer is $x = 4$.
5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract x : $2x + 8 = 14$. Subtract 8: $2x = 6$, so $x = 3$. So the final answer is $x = 3$.
6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $5x$: $4x - 4 = 8$. Add 4: $4x = 12$, so $x = 3$. So the final answer is $x = 3$.
7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $2x$: $7 = 3x - 2$. Add 2: $9 = 3x$, so $x = 3$. So the final answer is $x = 3$.
8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $3x$: $5x - 3 = 12$. Add 3: $5x = 15$, so $x = 3$. So the final answer is $x = 3$.
9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $6x$: $4x + 1 = 9$. Subtract 1: $4x = 8$, so $x = 2$. So the final answer is $x = 2$.
10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract x : $3x + 6 = 18$. Subtract 6: $3x = 12$, so $x = 4$. So the final answer is $x = 4$.
11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $2x$: $3x - 7 = 5$. Add 7: $3x = 12$, so $x = 4$. So the final answer is $x = 4$.
12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $2x$: $4x + 2 = 10$. Subtract 2: $4x = 8$, so $x = 2$. So the final answer is $x = 2$.
13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $4x$: $3x + 4 = 19$. Subtract 4: $3x = 15$, so $x = 5$. So the final answer is $x = 5$.
14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $3x$: $15 = 5x$. Divide by 5: $x = 3$. So the final answer is $x = 3$.
15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set $30 + 2x = 10 + 4x$. Subtract $2x$: $30 = 10 + 2x$; then $20 = 2x$, so $x = 10$ items. So the final answer is 10 items.
16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set $x + 12 = 4x$. Subtract x : $12 = 3x$, so $x = 4$. So the final answer is 4.
17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Set $8 + 2t = 2 + 4t$. Subtract $2t$: $8 = 2 + 2t$; then $6 = 2t$, so $t = 3$ years. So the final answer is 3 years.
18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Subtract $3x$: $2x - 8 = 2$. Add 8: $2x = 10$, so $x = 5$. So the final answer is $x = 5$.
