

# Finding the Midpoint

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 18

**Quick Review and Helpful Hints**

The midpoint of a segment is the *average* of the endpoints' coordinates:  $M = \left( \frac{x_1 + x_2}{2}, \frac{y_1 + y_2}{2} \right)$ . Add the two  $x$ -values and divide by 2 for the  $x$ -coordinate; do the same with the two  $y$ -values for the  $y$ -coordinate.

▶ **Example:** Find the midpoint between (2, 3) and (8, 7).

**Work:** Average the  $x$ -values:  $\frac{2 + 8}{2} = 5$ . Average the  $y$ -values:

$$\frac{3 + 7}{2} = 5.$$

★ **Answer:** (5, 5)

Midpoint of (2, 3) and (8, 7) is (5, 5).

◆ **Practice Problems**

Find the midpoint of the segment with the given endpoints.

| <p>1. (0, 0) and (4, 6) _____</p> <p>2. (1, 2) and (5, 8) _____</p> <p>3. (2, 4) and (6, 10) _____</p> <p>4. (-2, 3) and (4, 7) _____</p> <p>5. (0, 5) and (10, 5) _____</p> <p>6. (3, 1) and (9, 7) _____</p> <p>7. (-4, -2) and (2, 6) _____</p> | <p>8. (1, 1) and (7, 9) _____</p> <p>9. (5, 2) and (5, 10) _____</p> <p>10. (0, 0) and (8, 8) _____</p> <p>11. (-6, 4) and (2, -4) _____</p> <p>12. (3, 7) and (11, 3) _____</p> <p>13. (2, -3) and (8, 5) _____</p> <p>14. (-1, -1) and (5, 7) _____</p> |
|--|---|

◆ **Word Problems**

15. On a map, a road runs from town A at (2, 4) to town B at (10, 8). Where is the rest stop placed exactly halfway between them? \_\_\_\_\_
16. Two friends stand at (1, 3) and (7, 9). They agree to meet at the midpoint. What point is that? \_\_\_\_\_
17. A bridge spans from (-4, 2) to (6, 2). Find the midpoint of the bridge. \_\_\_\_\_
18. The endpoints of a circle's diameter are (0, -2) and (8, 6). The center is the midpoint. Find the center. \_\_\_\_\_

## Answer Keys

### Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The midpoint averages the two  $x$ 's and the two  $y$ 's:  $\frac{0+4}{2} = 2$  and  $\frac{0+6}{2} = 3$ , so  $(2, 3)$ . So the final answer is  $(2, 3)$ .
2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{1+5}{2} = 3$  and  $\frac{2+8}{2} = 5$ , giving  $(3, 5)$ . So the final answer is  $(3, 5)$ .
3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{2+6}{2} = 4$  and  $\frac{4+10}{2} = 7$ , so  $(4, 7)$ . So the final answer is  $(4, 7)$ .
4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Average even with a negative:  $\frac{-2+4}{2} = 1$  and  $\frac{3+7}{2} = 5$ . So the final answer is  $(1, 5)$ .
5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{0+10}{2} = 5$  and  $\frac{5+5}{2} = 5$ , so  $(5, 5)$ . So the final answer is  $(5, 5)$ .
6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{3+9}{2} = 6$  and  $\frac{1+7}{2} = 4$ . So the final answer is  $(6, 4)$ .
7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{-4+2}{2} = -1$  and  $\frac{-2+6}{2} = 2$ , giving  $(-1, 2)$ . So the final answer is  $(-1, 2)$ .
8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{1+7}{2} = 4$  and  $\frac{1+9}{2} = 5$ . So the final answer is  $(4, 5)$ .
9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Same  $x$ , so it stays 5; for  $y$ ,  $\frac{2+10}{2} = 6$ . So the final answer is  $(5, 6)$ .
10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{0+8}{2} = 4$  for both, so  $(4, 4)$ . So the final answer is  $(4, 4)$ .
11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{-6+2}{2} = -2$  and  $\frac{4+(-4)}{2} = 0$ . So the final answer is  $(-2, 0)$ .
12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{3+11}{2} = 7$  and  $\frac{7+3}{2} = 5$ . So the final answer is  $(7, 5)$ .
13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{2+8}{2} = 5$  and  $\frac{-3+5}{2} = 1$ . So the final answer is  $(5, 1)$ .
14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is  $\frac{-1+5}{2} = 2$  and  $\frac{-1+7}{2} = 3$ . So the final answer is  $(2, 3)$ .
15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The rest stop is the midpoint:  $(\frac{2+10}{2}, \frac{4+8}{2}) = (6, 6)$ . So the final answer is  $(6, 6)$ .
16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Meet at the midpoint:  $(\frac{1+7}{2}, \frac{3+9}{2}) = (4, 6)$ . So the final answer is  $(4, 6)$ .
17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Midpoint of the bridge:  $(\frac{-4+6}{2}, \frac{2+2}{2}) = (1, 2)$ . So the final answer is  $(1, 2)$ .
18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is The center is the midpoint of the diameter:  $(\frac{0+8}{2}, \frac{-2+6}{2}) = (4, 2)$ . So the final answer is  $(4, 2)$ .

## Want Even More PERT Math Practice?

### The Most Comprehensive PERT Math Preparation Bundle

Prep books, workbooks, and full-length practice tests

Complete review, detailed explanations, and realistic test practice

Scan Me

**Prep Books  
Workbooks  
Practice Tests**

**Important:** These PERT Math resources are made for extra practice after the worksheet. Scan the QR code above for the complete PERT Math preparation bundle.

#### Skill Review

- ✓ Builds number sense, algebra, geometry, and data skills
- ✓ Supports steady review before the PERT test
- ✓ Great for tutoring, homework, and independent practice

**Build the foundation.**

#### Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every question
- ✓ Useful after students finish topic worksheets

**Practice with purpose.**

#### Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps PERT preparation organized and calm

**Move forward prepared.**

### STUDENT FAVORITE • Master PERT Math From the Ground Up

#### PERT Math for Beginners

*The Ultimate Step-by-Step Guide to Preparing for the PERT Math Test*

Written by a top math teacher and aligned with the latest PERT Math test. From fractions and percents to algebra and geometry — explained the easy way.

- ✓ **Complete coverage** of every PERT Math topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom
