

# Factoring Trinomials

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 18

**Quick Review and Helpful Hints**

To factor  $x^2 + bx + c$ , find two numbers that *multiply* to  $c$  and *add* to  $b$ . Then write the factors as  $(x + \square)(x + \square)$  using those numbers. Watch the signs: a positive  $c$  means the numbers share a sign; a negative  $c$  means they have opposite signs.

▶ **Example:** Factor  $x^2 + 5x + 6$ . **Work:** Find two numbers that multiply to 6 and add to 5: that's 2 and 3. Write them as factors.  
 ★ **Answer:**  $(x + 2)(x + 3)$

	$x$	$2$
$x$	$x^2$	$2x$
$3$	$3x$	$6$

$(x + 2)(x + 3) = x^2 + 5x + 6.$

◆ **Practice Problems**

Factor each trinomial.

- |  |   |
|--|---|
| <p>1. <math>x^2 + 5x + 6</math> _____</p> <p>2. <math>x^2 + 8x + 15</math> _____</p> <p>3. <math>x^2 - 6x + 8</math> _____</p> <p>4. <math>x^2 - 3x - 10</math> _____</p> <p>5. <math>x^2 + 2x - 24</math> _____</p> <p>6. <math>x^2 - 10x + 21</math> _____</p> <p>7. <math>x^2 + x - 30</math> _____</p> | <p>8. <math>x^2 - 11x + 30</math> _____</p> <p>9. <math>x^2 + 4x - 12</math> _____</p> <p>10. <math>x^2 + 7x + 12</math> _____</p> <p>11. <math>x^2 - 9x + 20</math> _____</p> <p>12. <math>x^2 + x - 12</math> _____</p> <p>13. <math>x^2 - 4x - 21</math> _____</p> <p>14. <math>x^2 + 9x + 14</math> _____</p> |

◆ **Word Problems**

15. A rectangle has area  $x^2 + 7x + 10$ . Write its length and width as factors. \_\_\_\_\_
16. A rectangular garden model has area  $x^2 - 5x - 14$ . Factor it to represent possible side expressions. \_\_\_\_\_
17. The area of a square plus its border is  $x^2 + 6x + 9$ . Factor it. \_\_\_\_\_
18. A photo mat area is modeled by  $x^2 + 10x + 24$ . Factor it to show the side expressions. \_\_\_\_\_

## Answer Keys

1.  $(x + 2)(x + 3)$

2.  $(x + 3)(x + 5)$

3.  $(x - 2)(x - 4)$

4.  $(x - 5)(x + 2)$

5.  $(x + 6)(x - 4)$

6.  $(x - 3)(x - 7)$

7.  $(x + 6)(x - 5)$

8.  $(x - 5)(x - 6)$

9.  $(x + 6)(x - 2)$

10.  $(x + 3)(x + 4)$

11.  $(x - 4)(x - 5)$

12.  $(x + 4)(x - 3)$

13.  $(x - 7)(x + 3)$

14.  $(x + 2)(x + 7)$

15.  $(x + 2)(x + 5)$

16.  $(x - 7)(x + 2)$

17.  $(x + 3)^2$

18.  $(x + 4)(x + 6)$

### Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Two numbers that multiply to 6 and add to 5 are 2 and 3:  $(x + 2)(x + 3)$ . So the final answer is  $(x + 2)(x + 3)$ .

2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 15, add to 8: 3 and 5:  $(x + 3)(x + 5)$ . So the final answer is  $(x + 3)(x + 5)$ .

3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 8, add to  $-6$ : both negative,  $-2$  and  $-4$ :  $(x - 2)(x - 4)$ . So the final answer is  $(x - 2)(x - 4)$ .

4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-10$ , add to  $-3$ :  $-5$  and  $2$ :  $(x - 5)(x + 2)$ . So the final answer is  $(x - 5)(x + 2)$ .

5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-24$ , add to 2: 6 and  $-4$ :  $(x + 6)(x - 4)$ . So the final answer is  $(x + 6)(x - 4)$ .

6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 21, add to  $-10$ :  $-3$  and  $-7$ :  $(x - 3)(x - 7)$ . So the final answer is  $(x - 3)(x - 7)$ .

7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-30$ , add to 1: 6 and  $-5$ :  $(x + 6)(x - 5)$ . So the final answer is  $(x + 6)(x - 5)$ .

8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 30, add to  $-11$ :  $-5$  and  $-6$ :  $(x - 5)(x - 6)$ . So the final answer is  $(x - 5)(x - 6)$ .

9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-12$ , add to 4: 6 and  $-2$ :  $(x + 6)(x - 2)$ . So the final answer is  $(x + 6)(x - 2)$ .

10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 12, add to 7: 3 and 4:  $(x + 3)(x + 4)$ . So the final answer is  $(x + 3)(x + 4)$ .

11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 20, add to  $-9$ :  $-4$  and  $-5$ :  $(x - 4)(x - 5)$ . So the final answer is  $(x - 4)(x - 5)$ .

12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-12$ , add to 1: 4 and  $-3$ :  $(x + 4)(x - 3)$ . So the final answer is  $(x + 4)(x - 3)$ .

13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-21$ , add to  $-4$ :  $-7$  and 3:  $(x - 7)(x + 3)$ . So the final answer is  $(x - 7)(x + 3)$ .

14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 14, add to 9: 2 and 7:  $(x + 2)(x + 7)$ . So the final answer is  $(x + 2)(x + 7)$ .

15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 10, add to 7: 2 and 5:  $(x + 2)(x + 5)$ . So the final answer is  $(x + 2)(x + 5)$ .

16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to  $-14$ , add to  $-5$ :  $-7$  and 2:  $(x - 7)(x + 2)$ . So the final answer is  $(x - 7)(x + 2)$ .

17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 9, add to 6: 3 and 3, a perfect square:  $(x + 3)^2$ . So the final answer is  $(x + 3)^2$ .

18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is Multiply to 24, add to 10: 4 and 6:  $(x + 4)(x + 6)$ . So the final answer is  $(x + 4)(x + 6)$ .
