

Tips, Commissions, and Fees

Name: _____ Date: _____ Score: _____ / 18

Quick Review and Helpful Hints

A tip, commission, or fee is a *percent of an amount*. Multiply the amount by the percent (as a decimal). To find a *total* that includes a tip, add the tip to the original amount.

▶ **Example:** Find a 15% tip on a \$40 bill. **Work:** Change 15% to 0.15 and multiply by the bill: 0.15×40 . ★ **Answer:** \$6

Tip = percent of the bill.

◆ Practice Problems

Find each tip, commission, fee, or total.

- | | |
|--|---|
| <p>1. 15% tip on \$40 _____</p> <p>2. 20% tip on \$50 _____</p> <p>3. 10% tip on \$30 _____</p> <p>4. 5% commission on \$200 _____</p> <p>5. 10% fee on \$100 _____</p> <p>6. 18% tip on \$50 _____</p> <p>7. 25% commission on \$80 _____</p> | <p>8. 20% tip on \$35 _____</p> <p>9. 15% tip on \$20 _____</p> <p>10. 6% commission on \$500 _____</p> <p>11. 10% tip on \$45 _____</p> <p>12. 8% fee on \$50 _____</p> <p>13. 30% commission on \$90 _____</p> <p>14. 20% tip on \$60 _____</p> |
|--|---|

◆ Word Problems

15. A \$40 meal gets a 20% tip. Find the tip. _____
16. A salesperson earns 5% on \$2000 in sales. Find the commission. _____
17. A group has a \$60 dinner bill and agrees to leave a 15% tip before splitting the check. How much should they leave for the tip? _____
18. A \$50 service has a 10% fee added. Find the total cost. _____

Answer Keys

- | | | |
|--------------------------------------|---|--|
| 1. <input type="text" value="\$6"/> | 7. <input type="text" value="\$20"/> | 13. <input type="text" value="\$27"/> |
| 2. <input type="text" value="\$10"/> | 8. <input type="text" value="\$7"/> | 14. <input type="text" value="\$12"/> |
| 3. <input type="text" value="\$3"/> | 9. <input type="text" value="\$3"/> | 15. <input type="text" value="\$8"/> |
| 4. <input type="text" value="\$10"/> | 10. <input type="text" value="\$30"/> | 16. <input type="text" value="\$100"/> |
| 5. <input type="text" value="\$10"/> | 11. <input type="text" value="\$4.50"/> | 17. <input type="text" value="\$9"/> |
| 6. <input type="text" value="\$9"/> | 12. <input type="text" value="\$4"/> | 18. <input type="text" value="\$55"/> |

Step-by-Step Explanations

1. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 40 = \$6$. So the final answer is \$6.
2. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 50 = \$10$. So the final answer is \$10.
3. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 30 = \$3$. So the final answer is \$3.
4. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.05 \times 200 = \$10$. So the final answer is \$10.
5. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 100 = \$10$. So the final answer is \$10.
6. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.18 \times 50 = \$9$. So the final answer is \$9.
7. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.25 \times 80 = \$20$. So the final answer is \$20.
8. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 35 = \$7$. So the final answer is \$7.
9. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 20 = \$3$. So the final answer is \$3.

10. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.06 \times 500 = \$30$. So the final answer is \$30.
11. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.10 \times 45 = \$4.50$. So the final answer is \$4.50.
12. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.08 \times 50 = \$4$. So the final answer is \$4.
13. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.30 \times 90 = \$27$. So the final answer is \$27.
14. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 60 = \$12$. So the final answer is \$12.
15. Step by step: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.20 \times 40 = \$8$. So the final answer is \$8.
16. Take it one move at a time: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.05 \times 2000 = \$100$. So the final answer is \$100.
17. Start by naming the process: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $0.15 \times 60 = \$9$. So the final answer is \$9.
18. A good way to think about this is: Read what the problem is asking, choose the matching rule, write the setup, and then simplify one step at a time. The setup/work is $50 + 0.10 \times 50 = 50 + 5 = \55 . So the final answer is \$55.
