

# Factoring with the Greatest Common Factor

Name: \_\_\_\_\_ Date: \_\_\_\_\_ Score: \_\_\_\_\_ / 18

## Quick Review and Helpful Hints

The *GCF* is the largest factor shared by all terms – include common numbers *and* common variables. Factor the GCF out front and write what is left in parentheses. Check by distributing back.

▷ **Example:** Factor  $6x + 9$ . **Work:** The GCF of 6 and 9 is 3. Divide each term by 3:  $3(2x + 3)$ .

★ **Answer:**  $3(2x + 3)$

$$6x + 9 \xrightarrow{\text{GCF } 3} 3(2x + 3)$$

Pull out the common factor.

### ◆ Practice Problems

Factor out the greatest common factor.

- |   |  |
|---|--|
| <p>1. <math>6x + 9</math> _____</p> <p>2. <math>4x + 8</math> _____</p> <p>3. <math>10x - 15</math> _____</p> <p>4. <math>3x^2 + 6x</math> _____</p> <p>5. <math>12x - 18</math> _____</p> <p>6. <math>5x^2 + 10x</math> _____</p> <p>7. <math>8x + 12</math> _____</p> | <p>8. <math>9x^2 - 3x</math> _____</p> <p>9. <math>14x + 21</math> _____</p> <p>10. <math>2x^2 + 8x</math> _____</p> <p>11. <math>15x - 25</math> _____</p> <p>12. <math>6x^2 + 9x</math> _____</p> <p>13. <math>4x^2 - 6x</math> _____</p> <p>14. <math>20x + 30</math> _____</p> |
|---|--|

### ◆ Word Problems

15. A workshop has  $8x + 20$  total fasteners grouped into identical packets. Factor the expression to show the common packet size. \_\_\_\_\_
16. A rectangle's area is  $6x^2 + 9x$ . Factor it. \_\_\_\_\_
17. A banner uses  $12x^2 - 8x$  square inches of vinyl after trimming. Factor the expression to show the shared strip size. \_\_\_\_\_
18. A snack table has  $7x + 14$  items arranged in equal rows. Factor the expression to show the common row size. \_\_\_\_\_

## Answer Keys

- |                |                  |                  |
|----------------|------------------|------------------|
| 1. $3(2x + 3)$ | 7. $4(2x + 3)$   | 13. $2x(2x - 3)$ |
| 2. $4(x + 2)$  | 8. $3x(3x - 1)$  | 14. $10(2x + 3)$ |
| 3. $5(2x - 3)$ | 9. $7(2x + 3)$   | 15. $4(2x + 5)$  |
| 4. $3x(x + 2)$ | 10. $2x(x + 4)$  | 16. $3x(2x + 3)$ |
| 5. $6(2x - 3)$ | 11. $5(3x - 5)$  | 17. $4x(3x - 2)$ |
| 6. $5x(x + 2)$ | 12. $3x(2x + 3)$ | 18. $7(x + 2)$   |

### Step-by-Step Explanations

1. Start by naming the process: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 3:  $3(2x + 3)$ . So the final answer is  $3(2x + 3)$ .
2. A good way to think about this is: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 4:  $4(x + 2)$ . So the final answer is  $4(x + 2)$ .
3. Step by step: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 5:  $5(2x - 3)$ . So the final answer is  $5(2x - 3)$ .
4. Take it one move at a time: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $3x$ :  $3x(x + 2)$ . So the final answer is  $3x(x + 2)$ .
5. Start by naming the process: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 6:  $6(2x - 3)$ . So the final answer is  $6(2x - 3)$ .
6. A good way to think about this is: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $5x$ :  $5x(x + 2)$ . So the final answer is  $5x(x + 2)$ .
7. Step by step: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 4:  $4(2x + 3)$ . So the final answer is  $4(2x + 3)$ .
8. Take it one move at a time: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $3x$ :  $3x(3x - 1)$ . So the final answer is  $3x(3x - 1)$ .
9. Start by naming the process: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 7:  $7(2x + 3)$ . So the final answer is  $7(2x + 3)$ .
10. A good way to think about this is: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $2x$ :  $2x(x + 4)$ . So the final answer is  $2x(x + 4)$ .
11. Step by step: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 5:  $5(3x - 5)$ . So the final answer is  $5(3x - 5)$ .
12. Take it one move at a time: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $3x$ :  $3x(2x + 3)$ . So the final answer is  $3x(2x + 3)$ .
13. Start by naming the process: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $2x$ :  $2x(2x - 3)$ . So the final answer is  $2x(2x - 3)$ .
14. A good way to think about this is: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 10:  $10(2x + 3)$ . So the final answer is  $10(2x + 3)$ .
15. Step by step: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 4:  $4(2x + 5)$ . So the final answer is  $4(2x + 5)$ .
16. Take it one move at a time: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $3x$ :  $3x(2x + 3)$ . So the final answer is  $3x(2x + 3)$ .
17. Start by naming the process: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF  $4x$ :  $4x(3x - 2)$ . So the final answer is  $4x(3x - 2)$ .
18. A good way to think about this is: Look for the greatest factor shared by every term, factor it outside, and leave the remaining pieces in parentheses. The setup/work is GCF 7:  $7(x + 2)$ . So the final answer is  $7(x + 2)$ .

## Want Even More TSIA2 Math Practice?

### The Most Comprehensive TSIA2 Math Preparation Bundle

Prep books, workbooks, and full-length practice tests

Complete review, detailed explanations, and realistic test practice

Scan Me

Prep Books  
Workbooks  
Practice Tests

**Important:** These TSIA2 Math resources are made for extra practice after the worksheet. Scan the QR code above for the complete TSIA2 Math preparation bundle.

#### Skill Review

- ✓ Builds number sense, algebra, geometry, and data skills
- ✓ Supports steady review before the TSIA2 test
- ✓ Great for tutoring, homework, and independent practice

**Build the foundation.**

#### Test Practice

- ✓ Full-length practice tests for realistic pacing
- ✓ Detailed answer explanations for every question
- ✓ Useful after students finish topic worksheets

**Practice with purpose.**

#### Confidence

- ✓ Turns mistakes into targeted review
- ✓ Helps students see progress over time
- ✓ Keeps TSIA2 preparation organized and calm

**Move forward prepared.**

### STUDENT FAVORITE • Master TSIA2 Math From the Ground Up

#### TSI Math for Beginners

*The Ultimate Step-by-Step Guide to Preparing for the TSIA2 Math Test*

Written by a top math teacher and aligned with the latest TSIA2 Math test. From fractions and percents to algebra and geometry — explained the easy way.

- ✓ **Complete coverage** of every TSIA2 Math topic — perfect companion to these worksheets
- ✓ **Step-by-step explanations** with worked examples on every topic
- ✓ **QR codes in every chapter** for free video lessons & bonus practice
- ✓ **2 full-length practice tests** with detailed answer keys
- ✓ Perfect for self-study or the classroom

\* **STUDENT'S #1 CHOICE**
