

My ALEKS review plan

Use 14 sessions as a flexible starting point. Repeat a topic when you need more practice. Your starting skills and available study time determine your pace.

1. Confirm your college's requirements

College / target math course _____

Required score / deadline _____

Permitted tools / proctoring _____

Retake rules / prep requirements _____

My two priority skills _____

2. Schedule 14 focused review sessions

Learn one idea, practice independently, check the reasoning, and note what to revisit. Use your college's prep module or a topic lesson to choose the next skill.

Session	Date	Topic / resource	Next step
1			
2			
3			
4			
5			
6			
7			
8			
9			
10			
11			
12

This schedule supports skill review. It does not promise a placement score or replace an official ALEKS assessment.

My mistake log and next steps

A missed question tells you what to review. Write the skill and the step that went wrong, then try the method again in a later session.

3. Turn mistakes into a useful review list

Skill / date	Where I got stuck	What I will do differently	Revisit date

4. Prepare for your official assessment

- ☐ Confirm login, location, deadline, and any proctoring appointment.
- ☐ Use the official tutorial to become comfortable entering answers.
- ☐ Follow your college's rules for calculators, scratch paper, and outside help.
- ☐ Check placement results and next steps using your college's guidance.
